awake we identify with our body but if we let our mind wander or daydream we project a mentally imagined self into the remembered past or anticipated future As we fall asleep the impression of being a bounded self distinct from the world dissolves but the self reappears in the dream state If we have a lucid dream we no longer identify only with the self within the dream Our sense of self now includes our dreaming self the I as dreamer Finally as we meditate either in the waking state or in a lucid dream we can observe whatever images or thoughts arise and how we tend to identify with them as me We can also experience sheer awareness itself distinct from the changing contents that make up our image of the self Contemplative traditions say that we can learn to let go of the self so that when we die we can witness its dissolution with equanimity Thompson weaves together neuroscience philosophy and personal narrative to depict these transformations adding uncommon depth to life's profound questions Contemplative experience comes to illuminate scientific findings and scientific evidence enriches the vast knowledge acquired by contemplatives *The Publishers Weekly*, 2004 **21st**
