 Lang,2000-11-09 Rice is the food crop the world depends on most In *Feeding a Hungry Planet* James Lang demonstrates how  
 research has benefited rice growers and increased production He describes the life cycle of a rice crop and explains how  
 research is conducted and how the results end up growing in a farmer s field Focusing on Asia and Latin America Lang  
 explores lowland and upland rice systems genetics sustainable agriculture and efforts to narrow the gap between yields at  
 research stations and those on working farms Ultimately says Lang the ability to feed growing populations and protect fragile  
 ecologies depends as much on the sustainable on site farm technologies as on high yielding crop varieties Lang views  
 agriculture as a chain of events linking the farmer s field with the scientist s laboratory and he argues that rice cultivation is  
 shaped by different social systems cultures and environments Describing research conducted by the International Rice  
 Research Institute in the Philippines and by the International Center for Tropical Agriculture in Colombia he shows how  
 national programs tailor research to their own production problems According to Lang the interaction of research programs  
 practical problem solving and local extension efforts suggests a new model for international development      *Subject Guide
