the 1950s to the 1970s by A M Bidder E Boucaud Camou R Boucher Rodoni and K Mangold which established the basic mechanisms of digestion and absorption e g Bidder 1950 Boucaud Camou et al 1976 The last 10 years has seen a resurgence of research on the digestive tract stimulated by interest cephalopods particularly *Octopus vulgaris* and *Sepia officinalis* as candidate species for aquaculture and the potential impact of climate change on cephalopod ecology Additionally the inclusion of cephalopods in the European Union legislation regulating scientific research has necessitated improved understanding of dietary requirements and metabolism as well as the development of methods to monitor digestive tract function to ensure optimal care and welfare in the laboratory Prompted by this resurgence of interest in the cephalopod digestive tract and an international workshop on the topic held in November 2015 we have collected a series of papers reflecting the current state of the art The seventeen papers in this book combine original research publications and reviews covering a diversity of topics that are grouped under four main themes reflecting key topics in the physiology and ecology of the cephalopod digestive tract feeding strategies early life stages and aquaculture anatomy and digestive physiology care and welfare This book provides a timely synthesis of ongoing research into the cephalopod digestive tract which we hope will stimulate further studies into this relatively neglected aspect of cephalopod biology
