The Craft of Information Visualization Benjamin B. Bederson, Ben Shneiderman, 2003-05-22 Since the beginning of the computer age researchers from many disciplines have sought to facilitate people s use of computers and to provide ways for scientists to make sense of the immense quantities of data

coming out of them One gainful result of these efforts has been the field of information visualization whose technology is increasingly applied in scientific research digital libraries data mining financial data analysis market studies manufacturing production control and data discovery This book collects 38 of the key papers on information visualization from a leading and prominent research lab the University of Maryland s Human Computer Interaction Lab HCIL Celebrating HCIL s 20th anniversary this book presents a coherent body of work from a respected community that has had many success stories with its research and commercial spin offs Each chapter contains an introduction specifically written for this volume by two leading HCI researchers to describe the connections among those papers and reveal HCIL s individual approach to developing innovations Presents key ideas novel interfaces and major applications of information visualization tools embedded in inspirational prototypes Techniques can be widely applied in scientific research digital libraries data mining financial data analysis business market studies manufacturing production control drug discovery and genomic studies Provides an insider view to the scientific process and evolution of innovation as told by the researchers themselves This work comes from the prominent and high profile University of Maryland s Human Computer Interaction Lab New Algorithms, Architectures and Applications for Reconfigurable Computing Patrick Lysaght, Wolfgang Rosenstiel, 2005-12-05 New Algorithms Architectures and Applications for Reconfigurable Computing consists of a collection of contributions from the authors of some of the best papers from the Field Programmable Logic conference FPL 03 and the Design and Test Europe conference DATE 03 In all seventy nine authors from research teams from all over the world were invited to present their latest research in the extended format permitted by this special volume The result is a valuable book that is a unique record of the state of the art in research into field programmable logic and reconfigurable computing The contributions are organized into twenty four chapters and are grouped into three main categories architectures tools and applications Within these three broad areas the most strongly represented themes are coarse grained architectures dynamically reconfigurable and multi context architectures tools for coarse grained and reconfigurable architectures networking security and encryption applications Field programmable logic and reconfigurable computing are exciting research disciplines that span the traditional boundaries of electronic engineering and computer science When the skills of both research communities are combined to address the challenges of a single research discipline they serve as a catalyst for innovative research The work reported in the chapters of this book captures that spirit of that innovation Memory, Microprocessor, and ASIC Wai-Kai Chen, 2003-03-26 Timing memory power dissipation testing and testability are all crucial elements of VLSI circuit design In this volume culled from the popular VLSI Handbook experts from around the world provide in depth discussions on these and related topics Stacked gate embedded and flash memory all receive detailed treatment including their power cons

Haptics Technologies Abdulmotaleb El Saddik, Mauricio Orozco, Mohamad Eid, Jongeun Cha, 2011-09-15 The term haptics refers to the science of sensing and manipulation through touch Multiple disciplines such as biomechanics psychophysics

robotics neuroscience and software engineering converge to support haptics and generally haptic research is done by three communities the robotics community the human computer interface community and the virtual reality community This book is different from any other book that has looked at haptics The authors treat haptics as a new medium rather than just a domain within one of the above areas They describe human haptic perception and interfaces and present fundamentals in haptic rendering and modeling in virtual environments Diverse software architectures for standalone and networked haptic systems are explained and the authors demonstrate the vast application spectrum of this emerging technology along with its accompanying trends The primary objective is to provide a comprehensive overview and a practical understanding of haptic technologies An appreciation of the close relationship between the wide range of disciplines that constitute a haptic system is a key principle towards being able to build successful collaborative haptic environments Structured as a reference to allow for fast accommodation of the issues concerned this book is intended for researchers interested in studying touch and force feedback for use in technological multimedia systems in computer science electrical engineering or other related disciplines With its novel approach it paves the way for exploring research trends and challenges in such fields as interpersonal communication games or military applications
