Progression of Atrial Fibrillation after Cryoablation or Drug Therapy

Andrade JG et al. DOI: 10.1056/NEJMs2212540

CLINICAL PROBLEM

Atrial fibrillation may progress over time from a paroxysmal to a persistent form because of electrical and structural remodeling of the heart. In the EARLY-AF trial, treatment of paroxysmal atrial fibrillation with cryoablation led to a lower incidence of recurrence of any atrial tachyarrhythmias in the first year than antiarrhythmic drug therapy, but whether cryoablation reduces the risk of progression to persistent atrial fibrillation is unknown.

CLINICAL TRIAL

Design: In a follow-up analysis of the multicenter, randomized EARLY-AF trial involving patients with paroxysmal atrial fibrillation, the proportion of patients with progression to persistent atrial fibrillation after cryoablation was compared with that after the receipt of antiarrhythmic drug therapy.

Intervention: 303 patients who had undergone ablation or received antiarrhythmic drug therapy were followed for at least 3 years; an implantable continuous cardiac rhythm monitor was used to detect atrial fibrillation events. Data regarding the first episode of persistent atrial fibrillation and recurrent atrial tachyarrhythmia were collected.

RESULTS

Efficacy: During 3 years of follow-up, the incidence of persistent atrial fibrillation or recurrent atrial tachyarrhythmias was lower in the ablation group than in the antiarrhythmic drug group.

Safety: During follow-up, adverse events, including cardiac events and stroke, were less common in the ablation group than in the antiarrhythmic drug group.

LIMITATIONS AND REMAINING QUESTIONS

- Cardiovascular outcomes should be considered hypothesis-generating only.
- Some patients crossed over to ablation after failure of drug therapy.
- Only one ablation technology was used.

CONCLUSIONS

Patients with paroxysmal atrial fibrillation treated with cryoablation had a lower incidence of persistent atrial fibrillation or recurrent atrial tachyarrhythmias during 3 years of follow-up than those who had been treated with antiarrhythmic drugs.
