Army And Aviation:

British Army Aviation in Action Tim Ripley, 2012-07-19 The British Army is the UK's second largest operator of military aircraft fielding more than 300 armed helicopters fixed wing surveillance aircraft and unmanned aerial vehicles Its aviation units have been in the forefront of UK combat air operations in Kosovo Iraq and Afghanistan between 1999 and 2010 HRH Prince Harry was recently awarded his wings to allow him to begin training as an Apache attack helicopter pilot further raising the profile of British Army aviation This book will look at the current units and equipment used by British Army aviation elements of the Army Air Corps which operates helicopters and fixed wing aircraft and Royal Artillery which operates unmanned aerial vehicles or drones It will provide a detailed account of British Army aviation operations drawing on first hand accounts of army personnel and commanders official records and the author's observations from war zones [A History of Army Aviation](#) James W. Jr. Williams, James Williams, James W. Williams, 2005-09 spellbinding history the how what when where and why some never told and certainly not always understood This is a story that has begged to be told with sources and substance heretofore missing Historians military scholars and aviators will rely on this work for years Carl H McNair Jr Major General U S Army Retired This is worth a good read a welcome and long overdue history of Army Aviation Joseph L Galloway senior military correspondent Knight Ridder Newspapers and co author *We Were Soldiers Once and Young* Soldiers scholars and aviation enthusiasts alike can learn much from this comprehensive examination successfully blends lively and insightful historical narrative with astute analysis unfailingly honest assessment of contributions to our national defense Carol Reardon Pennsylvania State University author of *LAUNCH THE INTRUDERS* tightly written and focused traces the aviation branch from its inception through two world wars the loss of a major portion to the new Air Force up through its current role required reading for anyone who desires to understand Army aviation Darrel Whitcomb author of *The Rescue of Bat 21* and *Combat Search and Rescue in Desert Storm* tells the whole story concisely by addressing seven key themes crisp prose and well chosen illustrations This old ground pounder owes his life to brave crews of Army birds Henry Gole Ph D Colonel ret author of *Soldiering* *A History of Army Aviation 1950-1962* Richard P. Weinert, Susan Canedy, Army Training & Doctrine Command, 2011 U S Army aviation expanded dramatically in both size and breadth of activities after its inception in 1942 but much of its post World War II history particularly after the establishment of the Air Force as an independent service by the national Security Act of 1947 has been relatively neglected Despite a certain amount of jockeying for position by both services particularly in the early years after their separation the Army was able to carve out a clear transport and operational combat role for its own air arm *A History of Army Aviation 1950 1962* examines the development of the Army's air wing especially for air support of ground troops both in terms of organization and in relation to the ongoing friction with the Air Force After describing the rapid expansion of purely Army air power after 1950 and the accompanying expansion of aviation training the book delves into the reorganization of aviation activities within a Directorate of Army

Aviation It also provides a valuable account of the successful development of aircraft armament perhaps the most significant advance of this period In particular intensive experimentation at the Army Aviation School led to several practical weapons systems and helped to prove that weapons could be fired from rotary aircraft This arming of the helicopter was to have a profound effect on both Army organization and combat doctrine culminating in official approval of the armed helicopter by the Department of the Army in 1960 A History of Army Aviation 1950-1962 also explores the development of new aircraft between 1955 and 1962 including the UH 1 medical evacuation transport and gunship helicopter and the HC 1 cargo copter In addition the book discusses the Berlin Crisis of 1961 as an impetus for immediate and unexpected expansion of army aviation quickly followed by the beginnings of intervention in Vietnam by the end of 1962 *A History of Army Aviation, 1950-1962* Richard P. Weinert, 1991 **Eyes of Artillery** Edgar F. Raines, 2000 CMH Pub 70 31 Army Historical Series Examines the institutional origins of modern Army Aviation by recounting the experiences of the men who flew observed fire missions or Air Observations Posts AOP in light aircraft for the Field Artillery during World War 2 Identifies the circumstances and debate that gave rise to the AOP program **A History of Army Aviation 1950-1962**, 2011 **United States Army Aviation Digest**, 1977 History of Army Aviation, 1950-1962 Richard P. Raines, 2002-08-01 Warfare has had its third dimension air for so long that no soldier or airman now serving has a personal memory of the expectations adaptations or debate that accompanied its early years Air enthusiasts often appear to forget that the most effective applications of air power have been in concert with ground forces Indeed for three wars running World War II Korea and Vietnam the close support technique of choice featured airborne eyes and ground artillery This volume examines the institutional origins of modern Army Aviation by recounting the experiences of the men who flew observed fire missions in light aircraft for the Field Artillery during World War II The War Department designated these aircraft air observation posts but the ground troops they supported affectionately referred to them by such names as Maytag Messerschmidts and biscuit bombers instead Aircraft served as a key component of the Field Artillery indirect fire system and also played a crucial role in the command and control of armored divisions during mobile operations The author takes care to delineate how air observation posts interacted with each element of the combined arms team Eyes of Artillery identifies the circumstances and debate that gave rise to the Air Observation Post Program The development of military aviation generated an extended struggle within the Army for the control of aerial observation and posed related questions concerning how air and ground elements should interact with one another The author gives primary emphasis to the period from January 1939 when the Field Artillery began to actively seek control of its own observation aircraft until September 1945 when Japan surrendered and the War Department prepared to expand the organic light aircraft program to the other ground combat arms Many of the traditions concepts and disputes that still characterize Army Aviation originated during these critical years Eyes of Artillery is the first
