*Around the Coasts of Arabia* Amīn ar- Raiḥānī, 1930      **Archaeological Landscapes of the Near East** Tony J. Wilkinson, 2003-11 Many fundamental studies of the origins of states have built upon landscape data but an overall study of the Near Eastern landscape itself has never been attempted Spanning thousands of years of history the ancient Near East presents a bewildering range of landscapes the understanding of which can greatly enhance our ability to infer past political and social systems Tony Wilkinson now shows that throughout the Holocene humans altered the Near Eastern environment so thoroughly that the land has become a human artifact albeit one that retains the power to shape human societies In this trailblazing book the first to describe and explain the development of the Near Eastern landscape using archaeological data Wilkinson identifies specific landscape signatures for various regions and periods from the early stages of complex societies in the fifth to sixth millennium B C to the close of the Early Islamic period around the tenth century A D From Bronze Age city states to colonized steppes these signature landscapes of irrigation systems tells and other features changed through time along with changes in social economic political and environmental conditions By weaving together the record of the human landscape with evidence of settlement the environment and social and economic conditions Wilkinson provides a holistic view of the ancient Near East that complements archaeological excavations cuneiform texts and other conventional sources Through this overview culled from thirty years research Wilkinson establishes a new framework for understanding the economic and physical infrastructure of the region By describing the basic attributes of the ancient cultural landscape and placing their development within the context of a dynamic environment he breaks new ground in landscape archaeology and offers a new context for understanding the ancient Near East      *The West Coast of Hindustan Pilot* , 1898

Hassan Masry,2014-09-19 This manuscript in its original thesis form was published by Field Research Projects of Florida in

1974 It had a very limited circulation and was basically in the form of a mimeographed edition The version now published here represents the work for the first time as a proper publication in book form and has been revised and edited and is appropriately produced as a regular archaeological book Fundamentally this was and remains the seminal work on the subject and was the first in its field It is an integral work of scholarship of permanent value It is a work written in its own time and no attempt has been made to retrospectively interfere or change the nature of the text or its conclusions but to publish it for what it is The work has ushered in a series of field excavations and analyses that expand upon it and amplify the information already given in the work itself Thus one could say that this original work has had a seminal and indeed catalytic impact on the archaeology of the Gulf over the last two decades This edition first published in 1997 Routledge is an imprint of Taylor Francis an informal company      The Treasury of Bible Knowledge John Ayre, 1866      **Traditional Architecture of the Arabian Gulf** R. Hawker, 2008-06-10 This book chronicles the florescence of architecture in the Arabian Gulf after the expulsion of the Portuguese in the early 1600s It demonstrates how the power vacuum created by the collapse of Portuguese control over the trade routes in the Indian Ocean encouraged a growth in fortified architecture especially in Oman that radiated out to the surrounding region and was then slowly replaced by new patterns in domestic and public architecture and town planning throughout the Gulf as the trade lines were secured and the individual countries took the first steps towards the formation of today's modern nation states The book documents the buildings and crafts of this era and analyses them within the framework of the political economic and social information available through primary sources from the period in a way that is both intelligent and accessible It considers the settlements as part of a larger connected network of cities towns and villages and focuses both on how the buildings provided innovative solutions to the demanding climate and yet incorporated new decorative and functional ideas Topics are extensively and richly illustrated with colored photographs of the buildings as they are now black and white and color historic photographs from archival and museum collections line drawings and computer generated reconstructions The book is therefore attractive to a number of audiences including those who live in or travel to the Gulf as well as people with an interest in Arab and Islamic design culture and society vernacular architecture and post colonial approaches to colonial history      *Encyclopedia of Coastal Science* M. Schwartz, 2006-11-08 Honorable Mention Award for Excellence in Scholarly and Professional Publishing Maurice Schwartz Editor of the much acclaimed *Encyclopedia of Beaches and Coastal Environments* Hutchinson Ross 1982 has now brought forth a new volume with a fresh interdisciplinary approach that includes geomorphology ecology engineering technology oceanography and human activities as they relate to coasts Within its covers the *Encyclopedia of Coastal Science* includes many aspects of the coastal sciences that are only to be found scattered among scientific literature Being broadly interdisciplinary in its treatment of coasts the *Encyclopedia of Coastal Science* features contributions by 245 well known international specialists in their respective fields and is abundantly illustrated with line drawings and photographs Not only does this volume offer an

extensive number of entries it also includes various appendices an illustrated glossary of coastal geomorphology and extensive bibliographic listings This Encyclopedia thus provides a comprehensive reference work for students professionals as well as informed lay readers     *Encyclopedia of the World's Coastal Landforms* Eric Bird,2010-02-25 This unique richly illustrated account of the landforms and geology of the world s coasts presented in a country by country state by state sequence assembles a vast amount of data and images of an endangered and increasingly populated and developed landform An international panel of 138 coastal experts provides information on what is where on each sector of coast together with explanations of the landforms their evolution and the changes taking place on them As well as providing details on the coastal features of each country state or county the compendium can be used to determine the extent of particular features along the world s coasts and to investigate comparisons and contrasts between various world regions With more than 1440 color illustrations and photos it is particularly useful as a source of information prior to researching or just visiting a sector of coast References are provided to the current literature on coastal evolution and coastline changes
