**The Context of Explanation** M. Bunzl, 2012-12-06 In this book Martin Bunzl considers the prospects for a general and comprehensive account of explanation given the variety of interests that prompt explanations in science Bunzl argues that any successful account of explanation must deal with two very different contexts one static and one dynamic Traditionally theories of explanation have been built for the former of these two contexts That is to say they are designed to show how it is that a finished body of scientific knowledge can be put to explanatory use But finished sciences are few and far between Real explanation also occurs in a dynamical context in which questions are asked and answers are given as theories are in the process of being constructed Here Bunzl argues that attending to explanation produced under these dynamic circumstances undermines prominent features of the theory of explanation produced in the traditional static context *Savage & Aronson's Comprehensive Textbook of Perioperative and Critical Care Echocardiography* Alina Nicoara, Robert M. Savage, Nikolaos J. Skubas, Stanton K. Shernan, Christopher A. Troianos, 2022-07-13 Thoroughly revised to reflect new advances in the field Savage Aronson's Comprehensive Textbook of Perioperative and Critical Care Echocardiography Third Edition remains the definitive text and reference on transesophageal echocardiography TEE Edited by Drs Alina Nicoara Robert M Savage Nikolaos J Skubas Stanton K Shernan and Christopher A Troianos this authoritative reference covers material relevant for daily clinical practice in operating rooms and procedural areas preparation for certification examinations use of echocardiography in the critical care setting and advanced applications relevant to current certification and practice guidelines The Aronson Approach Simon Aronson, 1990 *Centrality of History for Theory Construction in Psychology* Sven Hroar Klempe, Roger Smith, 2016-11-03 This book offers a comprehensive overview of the purpose of history for psychology Its purpose is to ask why history should be of concern to psychologists in teaching and research and in theory and in practice The future position of humanities subjects is currently highly debated on all fronts Chapters focus on the arguments from psychologists upgrade the precision and quality of discussion and thus provide a base for affirming the place of history of psychology in the broad field of psychological activity A fundamental question dominates the discussion Is the purpose of the history of psychology to serve current psychology rather than to contribute to historical knowledge and to enter large debates about what historical knowledge means for being human If the answer is yes as most psychologists who come to the issues will presume in what ways Are these ways philosophically grounded or do the social and political conditions of power and funding in universities dominate the arguments In this volume the contributors demonstrate the relation between historical investigations and current practice Featured topics include The history of psychology and its relation to feminism The history of psychology and its relation to current research assessment and curriculum The history of science and its relation to psychology The metalanguage for psychology Case studies of history in theory construction Centrality of History for Theory Construction in Psychology will be of interest to psychologists professors graduate

### **Fairbairn's Object Relations Theory in the Clinical Setting**

David P. Celani, 2010 W R D Fairbairn 1889 1964 challenged the dominance of Freud's drive theory with a psychoanalytic theory based on the internalization of human relationships. Fairbairn assumed that the unconscious develops in childhood and contains dissociated memories of parental neglect, insensitivity and outright abuse that are impossible for the children to tolerate consciously. In Fairbairn's model, these dissociated memories protect developing children from recognizing how badly they are being treated and allow them to remain attached even to physically abusive parents. Attachment is paramount in Fairbairn's model as he recognized that children are absolutely and unconditionally dependent on their parents. Kidnapped children who remain attached to their abusive captors despite opportunities to escape illustrate this intense dependency even into adolescence. At the heart of Fairbairn's model is a structural theory that organizes actual relational events into three self and object pairs: one conscious pair, the central ego which relates exclusively to the ideal object in the external world; and two mostly unconscious pairs, the child's antilibidinal ego which relates exclusively to the rejecting parts of the object and the child's libidinal ego which relates exclusively to the exciting parts of the object. The two dissociated self and object pairs remain in the unconscious but can emerge and suddenly take over the individual's central ego. When they emerge, the other is misperceived as either an exciting or a rejecting object, thus turning these internal structures into a source of transferences and reenactments. Fairbairn's central defense mechanism, splitting, is the fast shift from central ego dominance to either the libidinal ego or the antilibidinal ego, a near perfect model of the borderline personality disorder. In this book, David Celani reviews Fairbairn's five foundational papers and outlines their application in the clinical setting. He discusses the four unconscious structures and offers the clinician concrete suggestions on how to recognize and respond to them effectively in the heat of the clinical interview. Incorporating decades of experience into his analysis, Celani emphasizes the internalization of the therapist as a new good object and devotes entire sections to the treatment of histrionic, obsessive and borderline personality disorders.

*Geological Approaches to Coral Reef Ecology* Richard B. Aronson, 2007-03-09 This book provides a unique perspective on the destruction, both natural and human caused, of coral reef ecosystems. Reconstructing the ecological history of coral reefs, the authors evaluate whether recent dramatic changes are novel events or part of a long term trend or cycle. The text combines principles of geophysics, paleontology and marine sciences with real time observation, examining the interacting causes of change: hurricane damage, predators, disease, rising sea level, nutrient loading, global warming and ocean acidification. Predictions about the future of coral reefs inspire strategies for restoration and management of ecosystems.

Useful for students and professionals in ecology and marine biology including environmental managers
