Around The World With Chemistry:

Teaching Chemistry Around the World Björn Risch, 2010 As teachers we often tend to expect other countries to teach chemistry in much the same way as we do but educational systems differ widely At Bielefeld University we started a project to analyse the approach to chemical education in different countries from all over the world Teaching Chemistry around the World 25 countries have participated in the project The resulting country studies are presented in this book This book may be seen as a contribution to make the structure of chemistry teaching in numerous countries more transparent and to facilitate communication between these countries Especially in the case of the school subject chemistry which is very unpopular on the one hand and occupies an exceptional position on the other hand due to its relevance to jobs and everyday life and most notably due to its importance for innovation capacity and problem solving we have to learn from each others educational systems Around the World with Chemistry Kurt Lanz, 1980

Chemistry Education and Sustainability in the Global Age Mei-Hung Chiu,Hsiao-Lin Tuan,Hsin-Kai Wu,Jing-Wen Lin,Chin-Cheng Chou,2012-12-05 This edited volume of papers from the twenty first International Conference on Chemical Education attests to our rapidly changing understanding of the chemistry itself as well as to the potentially enormous material changes in how it might be taught in the future Covering the full range of appropriate topics the book features work exploring themes as various as e learning and innovations in instruction and micro scale lab chemistry In sum the 29 articles published in these pages focus the reader s attention on ways to raise the quality of chemistry teaching and learning promoting the public understanding of chemistry deploying innovative technology in pedagogy practice and research and the value of chemistry as a tool for highlighting sustainability issues in the global community Thus the ambitious dual aim achieved in these pages is on the one hand to foster improvements in the teaching and communication of chemistry whether to students or the public and secondly to promote advances in our broader understanding of the subject that will have positive knock on effects on the world s citizens and environment In doing so the book addresses as did the conference the neglect suffered in the chemistry classroom by issues connected to globalization even as it outlines ways to bring the subject alive in the classroom through the use of innovative technologies **Are Chemical Journals Too Expensive and**

Inaccessible? National Research Council,Division on Earth and Life Studies,Board on Chemical Sciences and Technology,Chemical Sciences Roundtable,2005-05-09 On October 25 26 2005 the Chemical Sciences Roundtable held a workshop to explore issues involving those who use and contribute to chemical literature as well as those who publish and disseminate chemical journals As a follow up to the workshop a summary was written to capture the presentations and discussions that occurred during the workshop As a forum to discuss chemistry journals within the larger context of scientific technical and medical journal publishing the workshop covered whether chemists and chemical engineers have unique journal needs and if so whether these needs are being met in the current journal publishing environment Workshop participants also tackled how open access publishing might be applied to the chemical literature such as to provide authors

more freedom to distribute their articles after publication and allowing free access to chemical literature archives
