Arquitectura Y Climas:

Arquitectura y climas Rafael Serra Florensa, 2013-02-23 Desde los orígenes de la humanidad la arquitectura ha cumplido como primera función la protección contra los elementos atmosféricos. Los edificios son barreras contra la lluvia, el viento, refugios contra el frío o filtros contra el calor o la luz. Este libro pretende estudiar la variedad y complejidad de situaciones climáticas en todo el planeta. Ante cualquier condición climática lo que la arquitectura pretende siempre es conseguir cierto grado de confortabilidad. La consecución de cierto nivel de bienestar resulta en la práctica un fenómeno complejo en la que intervienen numerosos parámetros no siempre cuantificables. Desde una consideración genérica el análisis del bienestar se hace complejo.

Dimensiones de la sostenibilidad, 2004 **Arquitectura y climas**, 1999

La arquitectura en un clima de cambio Peter F. Smith, 2022-12-16 La construcción de edificios es especialmente implicada en las emisiones de dióxido de carbono y es conveniente que su diseño y construcción sea un factor primordial en la ofensiva por mitigar los efectos del cambio climático. En la nueva concepción de los edificios es fundamental el diseño integrado y por tanto debe haber un diálogo beneficioso entre arquitectos y servicios de ingeniería. El libro de Smith introduce lo último en técnicas prácticas de sostenibilidad e ilustra diversas tecnologías que se están desarrollando para crear ecoeficiencia prima en nuestro entorno construido. La obra promueve la asociación creativa entre los profesionales de la construcción, arquitectos, ingenieros y diseñadores con el fin de alcanzar las condiciones óptimas para los usuarios con la mínima demanda de combustibles fósiles. Es necesario que los estudiantes, los profesionales y la industria de la construcción sean conscientes de la importancia que tienen en la creación de una arquitectura que no sólo mejore la calidad de vida sino también que esa calidad sea sostenible. El texto de Smith nos ayuda a dirigir la mirada no sólo hacia atrás sino también hacia un adelante lleno de incertidumbres e interrogantes. Es un libro valioso que hay que leer con interés por su intención premonitrice sobre el cambio climático y el inevitable impacto en los modos de crear y habitar la arquitectura.

ARQUITECTURA, REVOLUCIÓN CIBERNÉTICA Y CLIMA COSTA LEANDRO TOMÁS, 2025-01-06 Dos teorías surgen como solución a un entorno ambiental en crisis y como propuestas ante la pronta escasez de recursos energéticos y materiales: estas son la Tercera Revolución Industrial y la Cuarta Revolución Industrial. Ambas tienen en común el devenir estrategias avanzadas complementarias para el desarrollo de una sociedad cibernética que lleve implícitos los problemas de la

superpoblación mundial y del control total de los sujetos las cosas y las energías a través de infraestructuras de información física y metafísica infraestructuras desde cuyo dominio se debe inevitablemente proyectar una arquitectura habitacional y sostenible A partir de una lectura crítica sobre las teorías de la Tercera y la Cuarta Revolución Industrial se interpreta dicho contexto con el objeto de proponer el proyecto de una nueva arquitectura De la práctica experimental con los enunciados y como verificación de estos resultar una nueva propuesta para la Ciudad de Buenos Aires en tanto fundamento de un tercer género del proyecto que integra una nueva dimensión de lo urbano y el valor de la arquitectura como calificadora del hábitat
