This year's workshop focused on various aspects of multimedia systems content networking and autonomous communication. A special emphasis was placed on upcoming autonomic content networks and technologies that contribute to their development. The call for papers attracted 64 submissions from 32 countries for the main workshop. The Program Committee accepted 16 papers, an acceptance rate of 25% that cover a range of topics including wireless and ad hoc networks in autonomic content networking, streaming and voice services, group and multi-party services and quality in video and Internet services. This year we also had a Demonstration Session on Future Multimedia Networking for which 12 papers were accepted out of submissions received from over 15 countries. It is our sincere hope that the proceedings of this workshop will serve as a valuable reference for multimedia researchers and developers.

**Applied Probability and Stochastic Processes** Richard M. Feldman, Ciriaco Valdez-Flores, 2009-11-27 This book is a result of teaching stochastic processes to junior and senior undergraduates and beginning graduate students over many years In teaching such a course we have realized a need to furnish students with material that gives a mathematical presentation while at the same time providing proper foundations to allow students to build an intuitive feel for probabilistic reasoning We have tried to maintain a balance in presenting advanced but understandable material that sparks an interest and challenges students without the discouragement that often comes as a consequence of not understanding the material Our intent in this text is to develop stochastic processes in an elementary but mathematically precise style and to provide sufficient examples and homework exercises that will permit students to understand the range of application areas for stochastic processes We also practice active learning in the classroom In other words we believe that the traditional practice of lecturing continuously for 50 to 75 minutes is not a very effective method for teaching Students should somehow engage in the subject matter during the teaching session One effective method for active learning is after at most 20 minutes of lecture to assign a small example problem for the students to work and one important tool that the instructor can utilize is the computer So times we are fortunate to lecture students in a classroom containing computers with a spreadsheet program usually Microsoft's Excel
