Rutsky,1999 On art and high tech **Art Practice in a Digital Culture** Hazel Gardiner,Charlie Gere,2016-04-15 Much as art history is in the process of being transformed by new information communication technologies often in ways that are either disavowed or resisted art practice is also being changed by those same technologies One of the most obvious symptoms of this change is the increasing numbers of artists working in universities and having their work facilitated and supported by the funding and infrastructural resources that such institutions offer This new paradigm of art as research is likely to have a profound effect on how we understand the role of the artist and of art practice in society In this unique book artists art historians art theorists and

curators of new media reflect on the idea of art as research and how it has changed practice Intrinsic to the volume is an investigation of the advances in creative practice made possible via artists engaging directly with technology or via collaborative partnerships between practitioners and technological experts ranging through a broad spectrum of advanced methods from robotics through rapid prototyping to the biological sciences

and nature's shifting constellations that are discernible at the micro level and as part of a larger chronological pattern. Included are subjects ranging from Renaissance wooden dolls, science in the Italian art academies and artisanal epistemologies in the followers of Leonardo to Surrealism and its precursors in Mannerist grotesques and the Wunderkammer, eighteenth-century plant printing, the climate and its artistic presentations from Constable to Olafur Eliasson and the hermeneutics of bioart. In their comprehensive introduction, editors Camilla Skovbjerg Paldam and Jacob Wamberg trace the Kantian heritage of radically separating art and technology and inserting both at a distance to nature, suggesting this was a transient chapter in history. Thus they argue the present renegotiation between art, technology and nature is reminiscent of the ancient and medieval periods in which art and technology were categorized as aspects of a common area of cultivated products and their methods: the Latin *ars*, the Greek *techne*, an area moreover supposed to imitate the creative forces of nature.

Technology, Design and the Arts - Opportunities and Challenges Rae Earnshaw, Susan Liggett, Peter Excell, Daniel Thalmann, 2020-06-22. This open access book details the relationship between the artist and their created works using tools such as information technology, computer environments and interactive devices for a range of information sources and application domains. This has produced new kinds of created works which can be viewed, explored and interacted with either as an installation or via a virtual environment such as the Internet. These processes generate new dimensions of understanding and experience for both the artist and the public's relationships with the works that are produced. This has raised a variety of interdisciplinary opportunities and issues and these are examined. The symbiotic relationship between artistic works and the cultural context in which they are produced is reviewed. Technology can provide continuity by making traditional methods and techniques more efficient and effective. It can also provide discontinuity by opening up new perspectives and paradigms. This can generate new ideas and produce a greater understanding of artistic processes and how they are implemented in practice. Tools have been used from the earliest times to create and modify artistic works. For example, naturally occurring pigments have been used for cave paintings. What has been created provides insight into the cultural context and social environment at the time of creation. There is an interplay between the goal of the creator, the selection and use of appropriate tools and the materials and representations chosen. Technology, Design and the Arts: Opportunities and Challenges is relevant for artists and technologists and those engaged in interdisciplinary research and development at the boundaries between these disciplines.
