## **Art And Science Of Optical Design:**

The Art and Science of Optical Design Robert R. Shannon, 1997-06-13 The Art and Science of Optical Design is a comprehensive introduction to lens design covering the fundamental physical principles and key engineering issues. Several practical examples of modern computer aided lens design are worked out in detail from start to finish. The basic theory and results of optics are presented early on in the book along with a discussion of optical materials. Aberrations and their correction and image analysis are then covered in great detail. Subsequent chapters deal with design optimization and tolerance analysis. Several design examples are then given beginning with basic lens design forms and progressing to advanced systems such as gradient index and diffractive optical components. In covering all aspects of optical design including the use of modern lens design software, this book will be invaluable to students of optical engineering as well as to anyone engaged in optical design at any stage.

both the newcomer and specialist in the field Rudolf Kingslake is regarded as the American father of lens design his book not revised since its publication in 1978 is viewed as a classic in the field Naturally the area has developed considerably since the book was published the most obvious changes being the availability of powerful lens design software packages theoretical advances and new surface fabrication technologies This book provides the skills and knowledge to move into the exciting world of contemporary lens design and develop practical lenses needed for the great variety of 21st century applications Continuing to focus on fundamental methods and procedures of lens design this revision by R Barry Johnson of a classic modernizes symbology and nomenclature improves conceptual clarity broadens the study of aberrations enhances discussion of multi mirror systems adds tilted and decentered systems with eccentric pupils explores use of aberrations in the optimization process enlarges field flattener concepts expands discussion of image analysis includes many new exemplary examples to illustrate concepts and much more Optical engineers working in lens design will find this book an invaluable guide to lens design in traditional and emerging areas of application it is also suited to advanced undergraduate or graduate course in lens design principles and as a self learning tutorial and reference for the practitioner Rudolf Kingslake 1903 2003 was a founding faculty member of the Institute of Optics at The University of Rochester 1929 and remained teaching until 1983 Concurrently in 1937 he became head of the lens design department at Eastman Kodak until his retirement in 1969 Dr Kingslake published numerous papers books and was awarded many patents He was a Fellow of SPIE and OSA and an OSA President 1947 48 He was awarded the Progress Medal from SMPTE 1978 the Frederic Ives Medal 1973 and the Gold Medal of SPIE 1980 R Barry Johnson has been involved for over 40 years in lens design optical systems design and electro optical systems engineering He has been a faculty member at three academic institutions engaged in optics education and research co founder of the Center for Applied Optics at the University of Alabama in Huntsville employed by a number of companies and provided consulting services Dr Johnson is an SPIE Fellow and Life Member OSA Fellow and an SPIE President 1987 He published numerous papers and has been awarded many patents Dr Johnson was founder and Chairman of the SPIE Lens Design Working Group 1988 2002 is an active Program Committee member of the International Optical Design Conference and perennial co chair of the annual SPIE Current Developments in Lens Design and Optical Engineering Conference Thoroughly revised and expanded to reflect the substantial changes in the field since its publication in 1978 Strong emphasis on how to effectively use software design packages indispensable to today's lens designer Many new lens design problems and examples ranging from simple lenses to complex zoom lenses and mirror systems give insight for both the newcomer and specialist in the field

**Intermediate Optical Design** Michael J. Kidger, 2004 This second volume based on Michael Kidger's popular short courses and workshops is aimed at readers already familiar with the concepts presented in Fundamental Optical Design SPIE Press Vol PM92 It begins with a sweeping discussion of optimization that is written with the user in mind and continues with a unique look at the role of higher order aberrations The book's key feature is its astounding

presentation of a wide range of practical design examples covering such problems as secondary spectrum correction high numerical aperture designs lasers zoom lenses tilted or decentered optical systems and price and performance requirements Each scenario is accompanied by an in depth discussion that goes well beyond the ray aberration plot including useful insights into an optical designer's thought processes     Handbook of Optical Design Daniel Malacara-Hernández, Zacarías Malacara-Hernández, 2003-09-21 Infused with more than 500 tables and figures this reference clearly illustrates the intricacies of optical system design and evaluation and considers key aspects of component selection optimization and integration for the development of effective optical apparatus The book provides a much needed update on the vanguard in the field with vivid e     Modern Information Systems Christos Kalloniatis, 2012-06-13 The development of modern information systems is a demanding task New technologies and tools are designed implemented and presented in the market on a daily bases User needs change dramatically fast and the IT industry copes to reach the level of efficiency and adaptability for its systems in order to be competitive and up to date Thus the realization of modern information systems with great characteristics and functionalities implemented for specific areas of interest is a fact of our modern and demanding digital society and this is the main scope of this book Therefore this book aims to present a number of innovative and recently developed information systems It is titled Modern Information Systems and includes 8 chapters This book may assist researchers on studying the innovative functions of modern systems in various areas like health telematics knowledge management etc It can also assist young students in capturing the new research tendencies of the information systems development     *Modular Optical Design* O.N. Stavroudis, 2013-04-17 Images are ubiquitous Their formation is one of nature's universalities Water droplets in suspension act in concert to produce rainbows A partially filled wine glass can be made to form the image of a chandelier at a boring dinner party The bottom of a water glass too can be made to produce an optical image wildly distorted perhaps but nevertheless recognizable as an optical image Primitive folklore abounds with images Perseus used his highly polished shield as a rear view mirror to lop off Medusa's head without turning himself into stone Narcissus displaying incredibly poor taste fell in love with his own reflection in a pool of water causing poor Echo to pine away to a mere echo and providing yet another term for the psychoanalytic lexicon Strepsiades according to Aristophanes proposed using a burning stone to melt a summons off the bailiff's wax tablet And the castaways in Jules Verne's MYsterious Island made a burning glass by freezing water in a watch crystal Everyone from the Baron Munchhausen to Tom Swift has gotten into the optics act with incredible but eminently useful optical devices Indeed Mother Nature herself has had a hand in evolving image making devices Any reasonably symmetric glob of transparent material such as an aggregate of cells is capable of forming an image It is not difficult to imagine the specialization of such an aggregate into a blastula like structure with an anterior window and light sensitive neurons at its posterior region     *Introduction to the Optical Transfer Function* Charles Sumner Williams, Orville A. Becklund, 2002 This work covers spatial frequency spread function wave

aberration and transfer function and how these concepts are related in an optical system how they are measured and calculated and how they may be useful
