Gap Junctions: Molecular Basis of Cell Communication in Health and Disease Dale J. Benos, Camillo Peracchia, 1999-12-14 Since the first gap junction protein connexin was cloned over a decade ago more than a dozen connexin genes have been cloned Consequently a wealth of information on the molecular basis of gap junctional communication has been accumulated This book pays tribute to this exciting era in the history of cell communication research by documenting the great strides made in this field as a result of the merging of biophysics and molecular biology two of the most powerful approaches to studying the molecular basis of membrane channel behavior Twenty eight comprehensive chapters authored by internationally recognized leaders in the field discuss the biophysical physiological and molecular characteristics of cell to cell communication via gap junctions Key aspects of molecular structure formation gating conductance and permeability of vertebrate and invertebrate gap junction channels are highlighted In addition a number of chapters focus on recent discoveries that implicate connexin mutations and alterations of gap junctional communication in the pathogenesis of several diseases including the X linked Charcot Marie Tooth demyelinating disease some forms of inherited sensorineural deafness malignant transformation cardiac malformations and arrhythmia eye lens cataract and Chagas disease

Cardiovascular Effects of Dihydropyridine-Type Calcium Antagonists and Agonists A. Fleckenstein, C. Van Breemen, R. Groß, F. Hoffmeister, 2013-03-12 Held at Boppard Germany October 3 6 1984 *Cardiac Glycosides* Kurt Greeff, 2012-12-06 Following the monographs by STRAUB 1924 and LENDLE 1935 this is the third

contribution to the Pharmacology of Cardiac Glycosides within the Handbook of Experimental Pharmacology which was founded by ARTHUR HEFFTER and continued by WOLFGANG HEUBNER Because of the need created by the length of time that had elapsed since LENDLE'S work the editorial board requested the rapid appearance of this 56th volume which represents current knowledge of the pharmacology and clinical pharmacology of cardiac glycosides In order to avoid any delay numerous authors were invited to contribute because shorter contributions take less time to prepare and are consequently more up to date The disadvantage is that some overlap between certain chapters could not be avoided despite the editor's efforts Overlapping can however actually be useful in that differing opinions may be provided and topical issues discussed from varying viewpoints This reminds the reader that scientific horizons in medicine should often be widened or revised I would like to thank DR ALANNA Fox and DR K ANANTHARAMAN for their help and advice in the revision of certain chapters I am also grateful to Springer Verlag and particularly to MR WINSTANLEY and MR EMERSON for their contribution to the completion of this volume through translation and corrections In conclusion I would like to thank MRS WALKER MR BISCHOFF MRS SEEKER and MR BERGSTEDT of Springer Verlag for their helpful support
