Basic Silkscreen Printmaking:

Silk-Screen Printing for Artists and Craftsmen Mathilda V. and James A. Schwalbach, 2012-07-26 Screen printing is simple enough for a child or beginner but it is also a favorite printing process of experienced artists and craftspeople. It allows for a wide range of creative possibilities. It is less inhibiting than other printing processes. And contrary to most other methods of printing it does not require the user to make the mental translations of a reversed image. The extreme versatility of the medium has opened completely new possibilities for design and expression in both serigraphy art prints and textile designs. The Schwalbachs book clearly explains how to employ silk screen printing in both of these areas producing a serigraph and making a fabric print. It also sets down all of the steps involved in constructing a printing board and frame, keying the screen, preparing inks or dyes and printing the color runs plus a list of various problems that might turn up and their solutions. Other facets discussed include the best ways of cleaning up, handling the completed print and working with different resists, paper blockout, washout, photo emulsion. There is even a special print project for the beginner using a cardboard frame and school tempera paint. Nearly 200 diagrams and photographs including 19 in full color make a clear text even clearer and offer examples of completed prints. The Schwalbachs taught silk screen printing for many years at the University of Wisconsin. They know how to communicate the essence of this craft in the best manner possible. With their book as a guide anyone can quickly master the techniques of silk screening printing.

The Complete Book of Silk Screen Printing Production J. I. Biegeleisen, 2012-04-26 This book gives a clear and complete picture of every aspect of press operation and silk screen technique from individually operated manual presses to modern automatic presses capable of turning out 2 000 3 000 impressions an hour and indicates its great versatility and range of applications. Extremely thorough in its coverage of the subject this volume includes practically everything of importance known about the silk screen process. After a brief historical account which shows how screen process has become one of the most important of the graphic arts the author provides detailed information on basic tools and equipment, stencil making and photo stencil methods, multicolor work, facts about paints, lacquers and other compounds and tips on matching colors and mixing the right colors for specific jobs. There are chapters on printing of decalcomanias, characteristics of different surfaces, textile and wallpaper printing, applique materials, printing on cylindrical and unusual surfaces, silk screen as a fine art, serigraphy, die cutting and finishing, automation in the industry and other topics. Completely serviceable to the commercial operator the book also contains discussions of estimating procedures, relative costs and selling prices and plant layout and shop management. The various steps in the process are all illustrated by numerous photographs and drawings. Other illustrations show modern plants and machines, presses and other equipment and examples of printing on containers, glassware, fabrics etc. In addition to a brief bibliography of books and publications on the subject there is a list of major manufacturers and dealers in screen process materials for convenient reference. A fully practical manual and for anyone working in the graphic arts this book was written
