Statistics for Business and Economics, 2008 *Statistical Thinking for Managers* David K. Hildebrand, Lyman Ott, 1998
Focusing on the analysis of data using modern statistical and spreadsheet software Hildebrand and Ott emphasize making sense of data and discuss not only how a statistical method is applied but why and why not Throughout the book the authors integrate computer use into the development of statistical concepts emphasizing the value of looking at data to make sure the right questions are being asked The real life applications and examples throughout challenge students to think like managers The case that concludes every chapter asks students to deal with a relatively unstructured situation and to explain the statistical reasoning in nontechnical language Modern statistical methods including resampling and bootstrapping are included In addition the authors emphasize quality control and improvement throughout the book and include three full chapters on regression and correlation methods **Statistical Thinking in Business, Second Edition** J. A. John, D. Whitaker, D.G. Johnson, 2005-08-29 Business students need the ability to think statistically about how to deal with uncertainty and its effect on decision making in business and management Traditional statistics courses and textbooks tend to focus on probability mathematical detail and heavy computation and thus fail to meet the needs of future managers Statistical

Thinking in Business Second Edition responds to the growing recognition that we must change the way business statistics is taught. It shows how statistics is important in all aspects of business and equips students with the skills they need to make sensible use of data and other information. This allows them to focus on using statistics to aid decision making rather than how to perform routine calculations. New in the Second Edition: A completely revised chapter on forecasting; Re arrangement of the material on data presentation with the inclusion of histograms and cumulative line plots; A more thorough discussion of the analysis of attribute data; Coverage of variable selection and model building in multiple regression; End of chapter summaries; More end of chapter problems; A variety of case studies throughout the book. The second edition also comes with a wealth of ancillary materials provided on a CD ROM packaged with the book. These include automatically marked multiple choice questions, answers to questions in the text, data sets, Excel experiments and demonstrations, an introduction to Excel and the StiBstat Add In for stem and leaf plots, box plots, distribution plots, control charts and summary statistics. Solutions to end of chapter exercises and powerpoint slides for lecturers are available directly from the publisher.
