

tion to their technical goals, DREEs would themselves add to the Air Force's experience base in team-focused, network-enabled systems and contribute to interactions across various Air Force R&D communities.

Such collaborative experimental arrangements are not unprecedented in research. For instance, consider the following from the economics research community:<sup>1</sup>

Computational laboratories (CLs) are computational frameworks that permit the study of complex system behaviors by means of controlled and replicable experiments. Agent-based computational economics (ACE) is the computational study of economies modeled as dynamic systems of interacting agents. ACE researchers generally conduct their studies in the context of CLs.

Research groups frequently cite the need for support to create shared data sets, testbed environments, and other infrastructure that will facilitate access to larger, scalable problems and community sharing. For example, consider the following excerpt from a 2003 report on strategic direction for artificial intelligence research at Cornell University:<sup>2</sup>

A common theme that emerged in all workshop sessions was the importance of data sets and testbeds. . . . Data sets and testbeds also have a powerful multiplier effect on research progress. A compelling, freely available data set may motivate hundreds of separate research studies, most by researchers with no connection (funding or otherwise) to the original producers of the data set. Particularly in areas where it is difficult to identify in advance the most promising technologies, the resulting breadth of voluntary effort can be crucial. . . . Support for the creation of freely available, sharable resources is likely to do more to move forward AI research in areas of interest to the Air Force than any other single action.

There are several examples of analogous testbeds already in use in the IS&T research community:

- Many researchers in robotics are participants in periodic RoboCups.<sup>3</sup> These events are exciting, involve a large community of researchers, and provide a challenging shared domain for research in perception, adversarial planning, cooperative agent behavior, and machine learning.
