Renewable Energy Applications for Freshwater Production Jochen Bundschuh, Jan Hoinkis, 2012-07-02 Worldwide many regions have a great potential to cover part of their pressing water needs by renewable energy powered water treatment processes using either thermal or membrane based technologies Not only arid and semiarid regions are increasingly suffering from water shortage but also many other regions face a limitation of freshwater resources either by increasing contamination of surface water bodies or groundwater resources unsuitable for drinking and irrigation purposes either due to their high grade of mineralization or their contents of toxic components In many areas without centralized water supply treatment techniques using locally available renewable energy resources such as wind solar and geothermal can provide an economical social and environmentally sustainable option for clean water production from seawater and from highly mineralized or otherwise unsuitable ground and surface water This book provides an overview on possible cost efficient techniques and application opportunities for different scales and shows why the implementation of these technologies faces numerous technological economic and policy barriers and provides suggestions how they can be overcome It serves as a synoptic compendium of the fundamentals of freshwater production using renewable energies applicable to all types of water ranging from brackish to marine water and also including industrial and communal residual water The book is aimed at professionals academics and decision makers worldwide working in the areas of water resources water supply land planning energy planning greenhouse gases emission mitigation and rural development Resources and References Donna S. Kocurek, Bayle

Woodside, 1995-12-31 This guide book provides references and resources for the complex field of hazardous waste and hazardous materials management The book is divided into general topics such as air quality industrial wastewater pollution prevention and risk assessment under hazardous waste management and chemical hazards emergency planning and hazard communication under hazardous materials management Each individual section includes a list of annotated bibliographies of

the most recent books by major publishers as well as established standard references Following the annotated titles are additional references of books and documents by publishers technical associations and governmental agencies primarily the U S Environmental Protection Agency In general only references from 1986 onward are included since the technology and regulations affecting hazardous waste and materials are constantly evolving Additional resources included in the book are video tapes for training and instruction information services and databases libraries agency contacts technical journals and a list of publishers and ordering information This book will be a useful reference to professionals in the environmental field who need an extensive but concise source of technical information and contacts The book will be a valuable addition to individual libraries and will fill a current reference void in university libraries and technical libraries in industry and government At present there are very few technical bibliographies in the field and none has covered topics related to hazardous materials and hazardous waste as extensively as this book
