Perspectives on Mathematical Practices Bart van Kerkhove,jean paul van bendegem,2007-06-01 Philosophy of mathematics today has transformed into a very complex network of diverse ideas viewpoints and theories Sometimes the emphasis is on the classical foundational work often connected with the use of formal logical methods sometimes on the sociological dimension of the mathematical research community and the products it produces then again on the education of future mathematicians and the problem of how knowledge is or should be transmitted from one generation to the next The editors of this book felt the urge first of all to bring together the widest variety of authors from these different domains and secondly to show that this diversity does not exclude a sufficient number of common elements to be present In the eyes of the editors this book will be considered a success if it can convince its

readers of the following that it is warranted to dream of a realistic and full fledged theory of mathematical practices in the plural If such a theory is possible it would mean that a number of presently existing fierce oppositions between philosophers sociologists educators and other parties involved are in fact illusory **Petroleum Taxation** Carole Nakhle,2008-04-29 This book provides a framework of economic analysis which both governments and the petroleum industry can draw upon in their negotiation of fiscal terms that offer a fair and just basis of wealth allocation and encourage balanced oil field development
