Introduction to Finite Element Modeling for Engineers Adel Elsabbagh, 2024-10-09 This book provides mechanical engineering students with the theoretical and fundamental basics of the Finite Element FE method used in structural mechanics Students should be able to apply this knowledge to develop FE models and use them to analyze systems both statically and dynamically The author believes that learning about the Finite Element tool without learning how to build computer codes for it makes it just a theoretical tool good only for very simple models with very few elements rather than being useful for practical problems In most of the chapters of this book computer codes using MATLAB are presented in order to render the developed models useful for practical applications Moreover the book also stresses on the idea that engineers should be able to convert real life problems into simplified models from which one can predict the behavior or the performance of the system

A Text Book In Basic Thermo / Fluid Dynamics Mohammad R. a. Shaalan, Mohammad A. Saleh, Saeed A.A. Ibrahim, Mohammad A.M. Elhady, 2022-04-19 It is recognized that the study of mechanical engineering is built of a number of engineering sciences some of which are of basic nature whereas some other are of applied nature Basic Thermodynamics and Basic Fluid Dynamics are probably the two most important basic engineering sciences in the build of a Mechanical Power Engineer In applied mechanical power engineering sciences the principles introduced and analysed in these two basic sciences are common divisors In other words we may look at these two branches of basic engineering sciences as two legs on which Mechanical Power Engineering applications appear to stand The science of Basic Thermodynamics is based mainly on a number of basic principles in the form of laws that lead to a number of equations describing and governing the behavior of several mechanical power systems It is therefore of particular importance to introduce and analyse such equations It is also essential to relate these principles and equations to each other and whenever possible to pertinent phenomena and applications This may be achieved via worked examples that stem from from engineering practice The science of Basic Fluid Dynamics is another basic engineering science of equal importance to Basic Thermodynamics The principles introduced and analysed by this basic science find applications in almost all applied mechanical power engineering sciences Examples of these applied sciences are Applied Thermodynamics Applied Fluid Dynamics Combustion Engineering Turbo machinery Refrigeration and Air conditioning Power Plants Gas dynamics Propulsion systems etc Because of the close inter relation between the science of basic thermodynamics and the science of basic fluid dynamics it has become a common practice to

contained both sciences in one textbook under the title Basic Thermo fluid Dynamics the title of the present textbook The present textbook on Basic Thermo fluid Dynamics has been divided into distinct parts A and B In part A we concentrate on Basic Thermodynamics attempting to present with as much clarity as possible the basic principles therein and giving several worked examples for the sake of clarification In part B we concentrate on Basic Fluid Dynamics applying the same philosophy as in Part A In this part also a special section in chapter five containing a rather concise manipulation of the applied science of Compressible Fluid Gas Dynamics is presented being an important combined application of the basic principles discussed in thermodynamics and fluid dynamics Moreover It was felt by the authors that it is particularly important to include this section on gas dynamics since in spite of being applied in nature it is regarded by many as basic more than applied The last chapter of Part A and chapter five of Part B cover some important engineering applications of the principles given apriori Each of these applications may be looked upon as a brief exposition of an applied engineering science carrying the title of the application under consideration This was felt imperative to the advantage hopefully to be gained by the student The authors are indebted to their colleague Dr Mohammad S H Emeara of the Mechanical Power Engineering Department Zagazig University for assisting with part of the illustrations and wish to thank him for rendering this assistance in the early stages of preparation of this textbook
