Basic Statistical Ideas F Mgrs Text:

Statistical Thinking for Managers J.A. John, D. Whitaker, D.G. Johnson, 2001-06-28 All business activities are subject to variability. As a consequence, managers and business students need the ability to think statistically about how to deal with the resulting uncertainty and its effect on decision making in management and commerce. To give them that ability, there is a growing recognition that we must change the way business statistics is taught. Traditional texts tend to focus on probability, mathematical detail, and heavy computation and thus fail to meet the real needs of future business managers. Statistical Thinking for Managers takes a very different, very practical approach that presents even sophisticated statistics concepts with a minimum of mathematics. It focuses on statistical thinking and discusses a range of topics that specifically apply to managers in business. Its scenario-based, interactive format and integrated use of Excel facilitate and reinforce the learning experience. Through this innovative treatment, readers will gain the ability to appreciate basic statistical ideas, use a scientific approach to problem solving, understand the nature of variability, use meaningful information to make informed decisions, think in terms of processes and systems, and develop strategies for process improvement. Designed as an introductory text in business statistics, Statistical Thinking for Managers challenges the way students look at business problems and issues. It shows them the importance of statistics in all aspects of business and equips them with the skills they need to make informed and effective decisions.

Introduction to Probability and Statistics for Ecosystem Managers Timothy C. Haas, 2013-05-21 Explores computer-intensive probability and statistics for ecosystem management decision making. Simulation is an accessible way to explain probability and stochastic model behavior to beginners. This book introduces probability and statistics to future and practicing ecosystem managers by providing a comprehensive treatment of these two areas. The author presents a self-contained introduction for individuals involved in monitoring, assessing, and managing ecosystems and features intuitive, simulation-based explanations of probabilistic and statistical concepts. Mathematical programming details are provided for estimating ecosystem model parameters with Minimum Distance, a robust and computer-intensive method. The majority of examples illustrate how probability and statistics can be applied to ecosystem management challenges. There are over 50 exercises, making this book suitable for a lecture course in a natural resource and/or wildlife management department or as the main text in a program of self-study. Key features: Reviews different approaches to wildlife and ecosystem management and inference; Uses simulation as an accessible way to explain probability and stochastic model behavior to beginners; Covers material from basic probability through to hierarchical Bayesian models and spatial spatio-temporal statistical inference; Provides detailed instructions for using R along with complete R programs to recreate the output of the many examples presented; Provides an introduction to Geographic Information Systems (GIS) along with examples from Quantum GIS, a free GIS software package; A companion website featuring all R code and data used throughout the book; Solutions to all exercises are presented along with an online intelligent tutoring system that supports

Managers and Management in Vietnam Vincent Edwards,Anh Phan,2013-01-17 This book presents a comprehensive overview of managers and management in Vietnam based on extensive original research including interviews with a large number of managers in Vietnam It shows how management in Vietnam is best understood from the perspective of Vietnamese managers themselves rather than in terms of Western or Asian models of management It discusses the range of enterprises in the Vietnamese economy which until 1986 was dominated by large state owned enterprises and Soviet style central economic planning and where there is now a much greater variety with a mix of privatised state owned enterprises foreign owned companies joint ventures and a very large number of relatively small private companies all operating in a social market economy where Party ideology emphasises a balance between economic growth and workers rights The book demonstrates how the tensions arising from this economic landscape are reflected in the views and actions of managers as they balance economic and social goals in their work and how their activities are constrained further by the enduring influence of local culture which is not always amenable to imported ideas and methods As many managers have worked in different kinds of companies the book also reveals a great deal about management in different contexts and also about how companies have changed as the reform process has evolved **Practical Research Methods for Nonprofit and Public Administrators** Gary R.
