Primary Care Procedures in Women's Health Cathryn B. Heath, Sandra M. Sulik, 2010-06-03 Despite the common perception that medicine is becoming specialty driven there are many reasons for primary care providers to offer women s health procedures in an office setting Women feel more comfortable having procedures done by providers whom they already know and trust Continuity of care is still valued by patients who trust their primary care providers to work with them as collaborators in the decision making process Women have found that their options for care have become limited not by their own decision but by the lack of training of their provider In rural areas the barriers of time expense and travel often prevent many women from obtaining necessary care yet many of the procedures that these women are requesting are relatively easy to learn Positive experiences are shared by women who then refer friends and family by word of mouth This book has been designed to assist not only the clinician performing the procedures covered but also the office staff with setting up the equipment tray prior to performing the procedure and with preparing office documents and coding information needed to complete the procedure Most procedures covered can be done with a minimum investment in equipment and require minimal training Pfenninger and Fowler's Procedures for Primary Care E-Book John L.
