Dreams and Dream Stories - Anna (Bonus) Kingsford Anna Bonus Kingsford,2009-11-27 A passage from the book The chronicles which I am about to present to the reader are not the result of any conscious effort of the imagination They are as the title page indicates records of dreams occurring at intervals during the last ten years and transcribed pretty nearly in the order of their occurrence from my Diary Written down as soon as possible after awaking from the slumber during which they presented themselves these narratives necessarily unstudied in style and wanting in elegance of diction have at least the merit of fresh and vivid color for they were committed to paper at a moment when the effect and impress of each successive vision were strong and forceful in the mind and before the illusion of reality conveyed by the scenes witnessed and the sounds heard in sleep had had time to pass away I do not know whether these experiences of mine are unique So far I have not yet met with any one in whom the dreaming faculty appears to be either so strongly or so strangely developed as in myself Most dreams even when of unusual vividness and lucidity betray a want of coherence in their action and an incongruity of detail and dramatis personae that stamp *Dreams and Dream Stories* Anna Bonus Kingsford,2023-03-11

Humans bond to each other in several ways The most enduring bonds are kin related based on closely shared genes The deepest bonding occurs when mother and infant are together continuously from birth and mother breast feeds the infant Bonds among family members are the most enduring Bonds to friends lovers and spouses are the next most significant Bonds to colleagues neighbors and even strangers that are admired from a distance are next Friendships are often temporary bonds based on the need to affiliate with others for protection social status feeding sex and fun Success in business and professions is dependent on affiliations with others Success depends on what you know on who you know and how well you are regarded Affiliations are ephemeral and must be maintained by regular contact grooming food sharing expressions of conformity and concern and exchange of gifts and favors Trust is established over time by regular and reliable maintenance of affiliation The strongest connections are maintained by grooming eating and sleeping together Social conventions rely on bonding Descriptions such as love affection friendship loyalty duty faith and obligation refer to affiliation and bonding Humans groups employ bonding strategies intentionally initiating new members into the group with rituals secrets symbols costumes and codes that distinguish members from non members Groups emphasize special privileges given to members and resist attempts of outsiders to enjoy these privileges The most celebrated bonding is described as falling in love and occurs between individuals who are not related The experience of falling in love is a complex of feelings emotions perceptions and cognition designed to bring to two people together in a tight exclusive bond that supports reproduction The essential feature of falling in love is a fascination with another person coupled with a drive to be with them and to protect them Men often idealize their loved one and suspend business as usual in favor of serving the needs of their potential spouses Women are overwhelmed with maternal feelings and fantasies of home the family and enduring devotion and support of the male The female task to choose the right male motivate and train him to devote all his resources to her and her children **Dreaming** Barbara Tedlock,1987-11-12 The authors Jungian analysts write for psychoanalysts and therapists who wish to integrate dream interpretation into their clinical practice In this book first published hardcover in 1987 ten contributing anthropologists and psychologists explore the ways in which dreams are remembered recounted shared or not shared interpreted and used by peoples around the world Annotation copyrighted by Book News Inc Portland OR **Catalogue of English Prose Fiction and Books for the Young in the Lower Hall of the Public Library of the City of Boston** Boston Public Library,1893 Histories of Dreams and Dreaming Giorgia Morgese,Giovanni Pietro Lombardo,Hendrika Vande Kemp,2019-06-13 In the late nineteenth century dreams became the subject of scientific study for the first time after thousands of years of being considered a primarily spiritual phenomenon Before Freud and the rise of psychoanalytic interpretation as the dominant mode of studying dreams an international group of physicians physiologists and psychiatrists pioneered scientific models of dreaming Collecting data from interviews structured observation surveys and their own dream diaries these scholars produced a large body of early research on the sleeping brain in the late nineteenth and early

twentieth centuries This book uncovers an array of case studies from this overlooked period of dream scholarship With contributors working across the disciplines of psychology history literature and cultural studies it highlights continuities and ruptures in the history of scientific inquiry into dreams *Lucifer* ,1889 **Scribner's Magazine** Edward Livermore Burlingame,Robert Bridges,Alfred Sheppard Dashiell,Harlan Logan,1891 *Catalogue of the Memorial Hall Library, Andover, Mass* ,1898 *Human Nature* Stephen Gislason,2017-07-05 Preface Being a human is challenging Human life is a journey thorough time and space with many obstacles injury disease constant uncertainty and relentlessly difficult interactions with other humans Each human is the reincarnation of a long lineage of ancestors Species memory perceptual skills needs drives feelings desires and behaviors are built in and begin operating in utero Humans evolved from primate ancestors and retained features of mind and behavior that have been present in animals for hundreds of millions of years Urges desires designs feelings cry out from within and often surprise us as if we were the hosts to wild animals and spirits within that refuse to be identified or tamed Human behavior can be understood in relation to the whole spectrum of primate behaviors and social organizations Humans appear to have an eclectic combination of primate tendencies with elaboration of features such as tool making symbolic reasoning and spoken language Linda Stone suggested that Primates are a natural grouping of mammals that includes prosimians tree dwelling animals such as lemurs and tarsiers monkeys apes and humans Some of the physical characteristics that distinguish primates from other mammals are binocular vision and the grasping hand with mobile digits and flat nails Evolutionary trends characteristic of the Primate Order are most pronounced in humans and include prolongation of gestation of the fetus prolongation of the period of infant care and expansion and elaboration of the brain An important feature in the social life of many nonhuman primates is dominance and the formation of dominance hierarchies a dominant animal wins aggressive encounters with others and usually has greater access to resources such as food water or sexual partners Rather than viewing society and culture as real things an observer can recognize that humans live in groups that repeat and modify innate behaviors to produce prolific variations on a few underlying themes that are common to all societies A smart observer will consider the grouping characteristics of humans and discern basic patterns and problems underlying the apparent complexity of modern civilization The organization of society begins with small local clusters that link family groups into clans that are more or less cooperative units Clans associate forming bands that tend to affiliate with other bands forming tribes looser affiliations that occupy larger geographic areas The band tribal structure emerges from ancient animal groupings Patterns of organization rules and institutions that regulate human behavior are in flux and will continue to be unstable As human populations expand and interactions become increasingly complex innate abilities are stretched and distorted The ability of individuals to relate to other humans remains limited and limits the effective management of enlarging groups Managers and leaders do not become smarter as the organizations they lead become larger It is axiomatic that organizations that exceed a threshold number

become dysfunctional It is matter of empirical study to recognize group size thresholds and too little is known about the cognitive limitations of leaders *Lewis Carroll's "Alice" and Cognitive Narratology* Francesca Arnavas,2021-01-18 We live in an age that is witnessing a growing interest in narrative studies cognitive neuroscientific tools mind studies and artificial intelligence hypotheses This book therefore aims to expand the exegesis of Carroll s Alice books aligning them with the current intellectual environment The theoretical force of this volume lies in the successful encounter between a great book and all its polysemous ramifications and a new interpretative point of view powerful enough to provide a new original contribution but well grounded enough not to distort the text itself Moreover this book is one of the first to offer a complete thorough analysis of one single text through the theoretical lens of cognitive narratology and not just as a series of brief examples embedded within a more general discussion It emphasises in a more direct effective way the actual novelty and usefulness of the dialogue established between narrative theory and the cognitive sciences It links specific concepts elaborated in the theory of cognitive narratology with the analysis of the Alice books helping in this way to discuss question and extend the concepts themselves opening up new interpretations and practical methods **Science Fiction and Fantasy Literature, Vol 1** R.
