Distribution Resource Planning ,1983 **Distribution** David F. Ross,2012-12-06 It has been said that every generation
of historians seeks to rewrite what a previous generation had established as the standard interpretations of the motives and
circumstances shaping the fabric of historical events It is not that the facts of history have changed No one will dispute that
the battle of Waterloo occurred on June 11 1815 or that the allied invasion of Europe began on June 6 1944 What each new
age of historians are attempting to do is to reinterpret the motives of men and the force of circumstance impacting the
direction of past events based on the factual social intellectual and cultural milieu of their own generation By examining the
facts of history from a new perspective today s historians hope to reveal some new truth that will not only illuminate the
course of history but also validate contempo rary values and societal ideals Although it is true that tackling the task of
developing a new text on logistics and distribution channel management focuses less on schools of philosophical and social
analysis and more on the calculus of managing sales campaigns inventory replenishment and income statements the goal of
the management scientist like the historian is to merge the facts and figures of the discipline with today s organizational
cultural and economic realities Hopefully the result will be a new synthesis where a whole new perspective will break forth
exposing new directions and opportunities Distribution Planning and Control David F. Ross,2011-06-27 When work began
on the first volume ofthis text in 1992 the science of dis tribution management was still very much a backwater of general
manage ment and academic thought While most of the body of knowledge associated with calculating EOQs fair shares
inventory deployment productivity curves and other operations management techniques had long been solidly established
new thinking about distribution management had taken a definite back seat to the then dominant interest in Lean thinking
quality management and business process reengineering and their impact on manufacturing and service organizations For
the most part discussion relating to the distri bution function centered on a fairly recent concept called Logistics Manage
ment But despite talk of how logistics could be used to integrate internal and external business functions and even be

considered a source of competitive advantage on its own most of the focus remained on how companies could utilize operations management techniques to optimize the traditional day to day shipping and receiving functions in order to achieve cost containment and customer fulfillment objectives In the end distribution management was for the most part still considered a dreary science concerned with transportation rates and cost trade offs expediting and the tedious calculus Today the science of distribution has become perhaps one of the most important and exciting disciplines in the management of business
