Drug Resistance In Leukemia And Lymphoma:

Drug Resistance in Leukemia and Lymphoma III G.J.L. Kaspers,R. Pieters,A.J.P. Veerman,2012-12-06 Cellular drug resistance is a major limitation to the success of chemotherapy of leukemia and lymphoma The importance of this has now been recognized by both clinicians and scientists It is of utmost importance to bridge the gap between laboratory and clinic in this field of research This is the main purpose of the series of International Symposia on Drug Resistance in Leukemia and Lymphoma These are held every three years in Amsterdam The Netherlands since 1992 This book contains the proceedings of the third of these meetings organised in 1998 The book covers all important aspects of drug resistance in leukemia and lymphoma both in the form of extensive reviews as in manuscripts describing original data General mechanisms of resistance are discussed including the drug resistance related proteins p glycoprotein MRP multi drug resistance protein and LRP lung resistance protein and the role of glutathione and glutathione S transferases Moreover more drug type specific mechanisms of resistance are a topic such as for glucocorticoids and antifolates Much information is provided on apoptosis and its regulators and on the results of cell culture drug resistance assays Several papers focus on the modulation or circumvention of drug resistance

Drug Resistance in Leukemia & Gert-Jan L. Kaspers,1993-01-01 The last ten years have seen the publication of a vast amount of data regarding cellular resistance to drugs in cancer cells Recent studies have demonstrated that drug resistance assays appear to be predictive of clinical response and suggest that clinicians should now be considering the potential applications of these assays in the treatment of patients with hematological neoplasms This collection of papers from the International Symposium on the Clinical Value of Drug Resistance Assays in Leukemia and Lymphoma Amsterdam 1992 provides a state of the art discussion on drug resistance assays and their role in the design and individualization of treatment protocols

Drug Resistance in Leukemia and Lymphoma II R. Pieters,G. J. L. Kaspers,A. J. P. Veerman,1997 Drug Resistance in Leukemia and Lymphoma contains material presented at the 2nd International Symposium in Drug Resistance in Leukemia and Lymphoma held at the Free University in Amsterdam in March 1995 In the last decade many studies have been performed in the field of drug resistance This book reviews the current status and indicates future directions of such studies Both laboratory scientists and clinicians have recognized the importance of drug resistance for the clinical outcome of patients with leukemia and lymphoma New in vitro cell culture assays have been developed and the in vitro drug resistance measured with these assays has been shown to correlate with both short and long term clinical response to chemotherapy This book is therefore an essential guide for researchers and clinicians

Drug Resistance As a Biochemical Target in Cancer Chemotherapy Makoto Ogawa,1991-11-12 Drug Resistance as a Biochemical Target in Cancer Chemotherapy covers the proceedings of the 13th Bristol Myers Squibb

Symposium on Cancer Research entitled Drug Resistance as a Biochemical Target in Cancer Chemotherapy hosted by the Japanese Foundation for Cancer Research in Tokyo This book is divided into four parts encompassing 18 chapters that summarize the results of both preclinical and clinical research on circumvention of drug resistance The first two parts discuss the genetic aspects of multidrug resistance and the proteins involved in drug resistance These parts also examine the structure function and expression of P glycoproteins with an emphasis on the role of these proteins as targets for cancer chemotherapy The third part describes the methods for detection of P glycoprotein and its antagonists to counter clinical drug resistance This topic is followed by a discussion on the interactions among steroid hormones steroid hormone receptors antiandrogens biological response modifiers and cytotoxic drugs in human breast cancer The concluding part explores the clinical applications of chemosensitizers in cancer therapy This part also considers the alternative clinical approaches against drug failure including non cross resistant therapies autologous bone marrow transplantation dose intensive therapy and high dose chemotherapy Biomedical scientists and researchers and clinicians will find this book invaluable

Xavier,Mitchell S. Cairo,2019-09-13 Over the past few decades lymphoma patient outcomes have improved as a result of multidrug chemotherapy and radiation therapy intensification of treatment improvement in supportive care and better imaging and staging systems Even more recently there has been tremendous progress in the understanding of cancer cell biology and its microenvironment which has resulted in the development of biologic agents also called target therapies These therapies are more specific in targeting cancer cells either directly or via enhancement of the immune system Many clinical studies have focused on biological agents in combination with traditional chemotherapy with the goal of improved outcomes or reduced acute long term complications that are associated with lymphoma therapy This volume will review different classes of target drugs that have been developed approved or are under investigation in the field of lymphoma therapy The discussion will not only be on the understanding of the mechanisms of action or clinical response of those agents but will also help the reader to understand the nature of lymphoma biology in patients who relapse or are refractor after exposure to those drugs Contributors will discuss what is currently known about mechanisms of tumor related or host related resistance and how to overcome this resistance This understanding is crucial given the dismal outcomes of patients with relapsed or refractory lymphomas The book provides a unique opportunity to review and reflect on the recent successes and pitfalls of the modern lymphoma therapy era *Cumulated Index Medicus* ,1991 **Drug-Resistance in Cancer Cells: A New**

Drug Resistance in Cancer Cells Kapil Mehta, Zahid H. Siddik, 2009-06-12 It was estimated that in 2008 1 437 180 patients would receive a new cancer diagnosis and 565 650 individuals would die of cancer Jemal et al 2008 Since the vast majority of patients dying of cancer will have had anticancer therapy both conventional chemotherapy and novel targeted therapy it can be concluded that these patients are dying with drug resistant cancer The term multidrug resistance is also apt in that these patients die after having undergone multiple rounds of different and structurally unrelated cancer therapies However for some the concept of multidrug resistance is a worn out idea stemming from disappointment with the drug resistance reversal strategies that were carried out in the 1990s using pump inhibitors to block drug resistance mediated by P glycoprotein product of the MDR 1 gene However if one takes the larger definition multidrug resistance as simultaneous resistance to multiple structurally unrelated anticancer therapies its existence cannot be denied The purpose of this book is to explore new concepts related to drug resistance in cancer including resistance to the new molecularly targeted agents Perhaps new terminology is needed for resistance that occurs following therapy with the targeted agents Novel Targeted Agent Resistance NTR Alternatively we can return to the original definition of multidrug resistance as simply the resistance to multiple agents that occurs in the course of normal cancer progression This resistance is likely to be mediated by many factors

Chemosensitivity Testing in Oncology Uwe Reinhold, Wolfgang Tilgen, 2012-12-06 Over the past 50 years many in vitro and in vivo drug response assay systems have been developed to determine the potential activity of chemotherapy agents The idea was to eliminate ineffective agents and unnecessary toxic treatment while selecting drugs active in vitro or in the mouse model that might increase the probability of response in the patient None of these test models however achieved routine clinical application in the past This might be at least in part related to large discrepancies that were described between the success rate of the assay systems and the clinical benefit in cancer patients The heterogeneity of chemosensitivity that exists between different tumors as well as between individual tumor lesions may be one explanation for these findings Furthermore different assay end points such as proliferation metabolism and vitality were developed to

evaluate the effects of cytostatic drugs on tumor cells and these might be related to the differing results. However, knowledge about procedures for assay-assisted treatment selection has increased rapidly within the past few years, and several studies suggest that test-directed chemotherapy selection now may prove response rates and survival in various types of tumors. The International Society for Chemosensitivity Testing in Oncology (ISCO) was founded to promote, coordinate, and improve clinical and laboratory research in the field of predictive drug testing in human tumor cells.
