Drug Resistance On Leukemia And Lymphoma The Clinical Value Of Laboratory Studies:

Drug Resistance in Leukemia and Lymphoma G.J.L. Kaspers,R. Pieters,P.R. Twentyman,1993-02-01 Drug Resistance in Leukemia and Lymphoma III G.J.L. Kaspers,R. Pieters,A.J.P. Veerman,2012-12-06 Cellular drug resistance is a major limitation to the success of chemotherapy of leukemia and lymphoma The importance of this has now been recognized by both clinicians and scientists It is of utmost importance to bridge the gap between laboratory and clinic in this field of research This is the main purpose of the series of International Symposia on Drug Resistance in Leukemia and Lymphoma These are held every three years in Amsterdam The Netherlands since 1992 This book contains the proceedings of the third of these meetings organised in 1998 The book covers all important aspects of drug resistance in leukemia and lymphoma both in the form of extensive reviews as in manuscripts describing original data General mechanisms of resistance are discussed including the drug resistance related proteins p glycoprotein MRP multi drug resistance protein and LRP lung resistance protein and the role of glutathione and glutathione S transferases Moreover more drug type specific mechanisms of resistance are a topic such as for glucocorticoids and antifolates Much information is provided on apoptosis and its regulators and on the results of cell culture drug resistance assays Several papers focus on the modulation or circumvention of drug resistance

Drug Resistance in Leukemia & Lymphoma Gert-Jan L. Kaspers,1993-01-01 The last ten years have seen the publication of a vast amount of data regarding cellular resistance to drugs in cancer cells Recent studies have demonstrated that drug resistance assays appear to be predictive of clinical response and suggest that clinicians should now be considering the potential applications of these assays in the treatment of patients with hematological neoplasms This collection of papers from the International Symposium on the Clinical Value of Drug Resistance Assays in Leukemia and Lymphoma Amsterdam 1992 provides a state of the art discussion on drug resistance assays and their role in the design and individualization of treatment protocols

Drug Resistance in Oncology S. Bernal,1997-08-21 This timely new reference integrates the latest clinical results and laboratory studies on the resistance of specific cancers to chemotherapeutic drugs covering drug resistance in lung breast ovary and colon cancer as well as hematological malignancies

Novel Approaches in Anticancer Drug Design W. J. Zeller,M. D'Incalci,D. R. Newell,1995-07-21 Acute Leukemias VIII T. Büchner,W. Hiddemann,B. Wörmann,G. Schellong,J. Ritter,U. Creutzig,2012-12-06 Since 1987 Acute Leukemias AL has regularly reported on the state of the art in the rapidly growing successful and exciting field of biology and management of these diseases In this volume large multicenter clinical trials again form the solid basis for the investigation of leukemic cell biology the detection of biologic subgroups their differential response to alternative treatment strategies and the further development of therapy In particular this volume addresses mechanisms of chromosomal translocations and transcription factors risk adapted treatment strategies differentiation therapy secondary AL special aspects in older patients and adoptive immunotherapy Besides the antileukemic approaches supportive treatment with new antimicrobial substances and growth factors is updated As a forum

of worldwide activities in the field of AL this volume contains both exhaustive overviews on major clinical issues and preliminary data and hypotheses not previously published

Innovative Leukemia and Lymphoma Therapy Gertjan J. L. Kaspers, Bertrand Coiffier, Michael C. Heinrich, Elihu H. Estey, 2019-09-17 Innovative Leukemia and Lymphoma Therapy provides a complete and up to date overview of the exciting new treatment modalities in leukemia and lymphoma that are being introduced in the clinic today Written by international experts in the field this volume examines clinical studies on topics such as tyrosine kinase inhibitors histone deacetylase

Chemosensitivity Rosalyn D. Blumenthal, 2008-02-01 A state of the art collection of readily reproducible laboratory methods for assessing chemosensitivity in vitro and in vivo and for assessing the parameters that modulate chemosensitivity in individual tumors Chemosensitivity Volume 1 In Vitro Assays provides a panel of 16 in vitro measures of chemosensitivity in adherent and non adherent cells for single agents and combinations of agents In addition to immunohistochemical and imaging approaches these assays include clonogenic colorimetric fluorometric and physiological assays Highlights include image analysis to assess drug sensitivity high throughput approaches using green fluorescent protein DIMSCAN a microcomputer fluorescence based assay and the ChemoFx assay used in biotechnology A companion volume Volume 2 In Vivo Models Imaging and Molecular Regulators provides protocols for classifying tumors into response categories and customizing chemotherapy regimens to individual patients

Acute Leukemias VII Wolfgang Hiddemann, Thomas Büchner, Bernhard Wörmann, Jörg Ritter, Ursula Creutzig, William Plunkett, 2012-12-06 The 7th volume of the book series Acute Leukemias provides new updates on the biology of acute leukemias and especially the underlying genetic and molecular events High quality contributions are provided by leading scientists and clinicians making the book an excellent overview over most recent achievements which translate into new treatment strategies and hence an improved outlook for patients suffering from acute leukemias

Chemosensitivity Testing in Oncology Uwe Reinhold, Wolfgang Tilgen, 2012-12-06 Over the past 50 years many in vitro and in vivo drug response assay systems have been developed to determine the potential activity of chemotherapy agents The idea was to eliminate ineffective agents and unnecessary toxic treatment while selecting drugs active in vitro or in the mouse model that might increase the probability of response in the patient None of these test models however achieved routine clinical application in the past This might be at least in part related to large discrepancies that were described between the success rate of the assay systems and the clinical benefit in cancer patients The heterogeneity of chemosensitivity that exists between different tumors as well as between individual tumor lesions may be one explanation for these findings Furthermore different assay end points such as proliferation metabolism and vitality were developed to evaluate the effects of cytostatic drugs on tumor cells and these might be related to the differing

results However knowledge about procedures for assay assisted treatment selection has increased rapidly within the past few years and several studies suggest that test directed chemotherapy selection now may prove response rates and survival in various types of tumors The International Society for Chemosensitivity Testing in cology ISCO was founded to promote coordinate and improve clinical and laboratory research in the field of predictive drug te ing in human tumor cells Acute Leukemias VI Thomas Büchner,Wolfgang Hiddemann,Bernhard Wörmann,Günter Schellong,Jörg Ritter,Ursula Creutzig,2012-12-06 For 10 years the book series Acute Leukemias has been providing updates on the rapid progress being made internationally concerning this group of diseases The fifth volume mainly addressed experimental approaches but the present issue presents both therapeutic and prognostic aspects of the most recent results from major multicenter clinical trials Additional chapters report new trends in leukemia cell biology the monitoring of minimal residual disease and secondary leukemias as well as new antileukemic drugs antimicrobial strategies and the use of cytokines The combined efforts against acute leukemias described in this book explain the recent improvements in the outcome of patients suffering from acute leukemias *Index of Conference Proceedings* ,1994 **Anticancer Research** ,1995 **DHEW Publication** ,1977 **Associate Training Programs in the Medical and Biological Sciences at the National Institutes of Health** National Institutes of Health (U.S.), **Cancer Research** ,2008-08 *Autologous Stem Cell Transplantation* Angelo Carella,2020-08-26 This textbook integrates basic research and clinical aspects underlying the most recent results in those malignant diseases where progress is most effective Recent evidence shows that higher doses are better in inducing higher cure rates in hematological neoplasias although myeloblation related to dose intensity can be a limiting factor The toxicity can now be controlled with autologous marrow and peripheral blood progenitor cell transplantation used with or without growth factors The combination of high dose chemoradiotherapy followed by re infusion of autologous stem cells constitute a dramatic advance in the treatment of refractory and relapse hematological neoplasias **Cell Biology** Julio E. Celis,1998 V 1 cell and tissue culture and associated techniques Primary cultures from embryonic and newborn tissues Culture of specific cell types Cell separation techniques Model systems to study differentiation cell cycle analysis Assays of tumorigenicity invasion and others Cytotoxic and cell growth assays Senescence and apoptosis Electrophysiological methods Histocultures and organ cultures Other cell types and organisms Viruses Appendices v 2 Organelles and cellular structures Assays Antibodies Immunocytochemistry Vital staining of cells v 3 Light microscopy and contrast generation Electron microscopy Intracellular measurments Cytogenetics and in situ hybridization transgenic and gene knockouts v 4 Transfer of macromelcules and small molecules Expression systems Differential gene expression Proteins Appendix List of suppliers Subject index
