Drug Therapy In Old Age:

Drug Therapy for the Elderly Martin Wehling, 2012-08-17 With people aged 65 years and older currently making up the fastest growing age group throughout the world the demographic revolution of an aging society will inevitably lead to increased pressure to develop a rationalistic and age tailored process of diagnosis and treatment among the elderly As aging people often suffer from several chronic diseases and are being treated with multiple medications concurrently unwanted drug interactions occur more frequently Whereas recent approaches have recommended to remove particular drugs from the medication regimen to avoid adverse effects Drug Therapy for the Elderly underlines both indispensable and dispensable elements of drug treatment in order to provide an overall assessment of drugs suitable for the aged In view of the multimorbidity and polypharmacy situations experienced by elderly patients this book takes into account the special needs and requirements shown by this group thus serving as a timely reference for physicians who treat the elderly **Aging and**

Drug Therapy G. Barbagallo-Sangiorgi, A.N. Exton-Smith, 2012-12-06 One of the greatest advances in Geriatric Medicine during the last quarter of a century has been the increased realization of the possibilities of treatment for elderly patients Neglect has been replaced by a more optimistic therapeutic endeavour and countless old people have benefitted from this approach But there is also a drawback and this is the risk of hazardous side effects of medication which are often directly proportional to the biological potency of the drug and may be unpredictably increased due to changes in the senile organism In fact the anatomical and biological changes in old age alter both the kinetics of most drugs and the receptor response On account of these changes the individual tolerance of aged patients to drug therapy may be quite different from that of younger subjects Thus for a variety of reasons elderly patients receive more drugs but they are at a higher risk of encountering adverse reactions which often show atypical clinical features We can therefore speak of geriatric iatrogenic disorders and point out that some of these side effects are determined by a complex pathogenesis due to the particular pathophysiological condition in the elderly It is important to encourage the habit of individually evaluating potential risk versus expected advantages of drugs in keeping with the same principles adopted in the evaluation of cost benefit ratio

Cardiovascular Drug Therapy in the Elderly Adam Schneeweiss, Gotthard Schettler, 2013-11-11 Cardiovascular drug therapy has markedly progressed in the recent decades Not only have new drugs been introduced to clinical practice but new classes of drugs have been developed While in 1960 the practicing cardiologist had a selection of about only ten drugs in 1987 about 150 drugs are routinely used in cardiovascular diseases Elderly patients however usually do not enjoy the full benefit of this progress This might be due to lack of knowledge a conservative approach or the worldwide tendency not to try new drugs in the elderly It is now clear that the majority of patients that will be treated in cardiovascular clinics will be in the near future elderly patients Even now elderly patients form about one third of the patients with cardiovascular diseases These patients are approached however according to criteria developed for younger populations This is despite the fact that elderly patients differ from younger ones in most aspects including pathology epidemiology pathophysiology diagnostic approach management pharmacology pharmacokinetics rehabilitation and supportive treatment It is the purpose of this book to present to the clinician all drugs with which there is clinical experience in the elderly or which might be potentially useful for the elderly with cardiovascular diseases The data are presented without the authors taking a position This should allow the clinicians to make their own selection and individualize treatment vii viii Preface based on a wide data base Comparative data are presented only when specific comparative studies were performed
