FIBEROPTIC AIRWAY ENDOSCOPY IN ANESTHESIA AND CRITICAL CARE MEDICINE

by Andranik Ovassapian
Raven Press

The fiberoptic bronchoscope was invented in the late 1960s as a diagnostic tool for a variety of endobronchial conditions. Over the years, several therapeutic applications of the instrument have also emerged: it can be used to relieve airway obstruction caused by neoplasms, strictures, or broncholiths; to palliate minor hemoptysis; or to remove endobronchial foreign bodies. These therapeutic uses of the instrument have been overshadowed by experience with the rigid bronchoscope, but one therapeutic application remains unique to the fiberoptic bronchoscope: its role in facilitating endotracheal intubation.

The present book, the first of its kind, deals exclusively with this application of the instrument in the field of anesthesiology and critical care, and certainly deserves a welcome by the respective subspecialties. Seldom do residents in anesthesia or critical care medicine receive formal training in flexible fiberoptic bronchoscopy. This book is a step towards generalizing the use of the instrument in these subspecialties.

The subject is covered thoroughly and in a well-organized fashion by the anesthesiology and radiology staff from Northwestern University Medical School, Chicago. Each chapter begins with a brief outline. The text is accompanied by appropriate tables and beautiful, well-selected color and black-and-white schematic illustrations and pictures.

The chapter on principles of flexible fiberoptic endoscopy is a highlight of this book. To my knowledge, this is the first time readers are exposed to the internal structure of the fiberoptic bronchoscope—valuable information for proper handling of the instrument. The table comparing flexible fiberoptic bronchoscopes from different companies is extremely helpful for selecting the proper instrument for a particular indication.

The selected case reports are another hidden wealth of this publication. This section complements the previous chapters by highlighting issues of difficult en-

dotracheal intubations.

As the title of this book suggests, the role of the flexible fiberoptic bronchoscope in critical care includes evaluation of lung infiltrates in critically ill patients; however, this specific application was not discussed. In the next edition of this book, a chapter on this topic would be desirable.

Given the merits of the book, however, mentioning this oversight seems hypercritical. Ovassapian's book deserves a place in the library of every anesthesiologist and critical care physician.

DRUG TREATMENT IN CANCER PAIN IN A DRUG-ORIENTED SOCIETY

Edited by C. Stratton Hill Jr. and William S. Fields
Raven Press

This book, volume 11 in the series *Advances in Pain Research and Therapy*, is a comprehensive statement of the problems associated with management of cancer pain and will interest anyone concerned with pain management or hospice care. Topics covered include attitudes of physicians and other professionals in dealing with cancer pain management; regulations that restrict or inhibit the prescribing of opiates for patients who have legitimate needs; and novel approaches to opioid delivery and use to improve cancer pain management. The authors make the point that many lessons about problems associated with opiate use have been drawn from experience with the addict population, and so are of dubious relevance to the cancer patient.

The book provides data from experimental areas, clinical research, and clinical experience. The majority of the contributors are well known in their fields in academia, medical practice, and the pharmaceutical industry. Both the newcomer and the reader experienced in the field will find stimulating discussion here.

The Meaning of Illness S. Kay Toombs, 2013-11-11 A PHENOMENOLOGICAL APPROACH My interest in exploring the nature of the patient's and the physician's understanding of illness has grown out of my own experience as a multiple sclerosis patient In discussing my illness with physicians it has often seemed to me that we have been somehow talking at cross purposes discussing different things never quite reaching one another This inability to communicate does not for the most part result from inattentiveness or insensitivity but from a fundamental disagreement about the nature of illness Rather than representing a shared reality between us illness represents two quite distinct realities the meaning of one being significantly and distinctively different from the meaning of the other In this work I shall suggest that psychological phenomenology provides the means to examine the nature of this fundamental disagreement between physician and patient in a rigorous fashion In particular psychological phenomenology discloses the manner in which the of his or her experience individual constitutes the meaning In providing a phenomenological description 2 the phenomenologist is committed to the effort to begin with what is given in immediate experience to turn to the essential features of what presents itself as it presents itself to consciousness and thereby to clarify the constitutive activity of consciousness and the sense structure of experiencing

Handbook of Pain and Aging David I.

Mostofsky, Jacob Lomranz, 2013-11-11 From time to time professional journals and edited volumes devote some of their pages to considerations of pain and aging as they occur among the aged in different cultures and populations One starts from several reasonable assumptions among them that aging per se is not a disease process yet the risk and frequency of disease processes increase with ongoing years The physical body's functioning and ability to restore all forms of damage and insult slow down the immune system becomes compromised and the slow growing pathologies reach their critical mass in the later years The psychological body also becomes weaker with unfulfilled promises and expectations and with tragedies that visit individuals and families and the prospect that whatever worlds remain to be conquered will most certainly not be met with success in the rapidly passing days and years that can only culminate in death Despair and depression coupled with infirmity and sensory and or motor inefficiency aggravate both the threshold and the tolerance for discomfort and synergistically collaborate to perpetuate a vicious cycle in which the one may mask the other Although the clinician is armed with the latest advances in medicine and pharmacology significant improvement continues to elude her or him The geriatric specialist all too familiar with such realities usually can offer little else than a hortative to learn to live with it but the powers and effectiveness of learning itself have declined

Pain Keith Wailoo, 2014-05-15 Pain touches sensitive nerves in American liberalism conservatism and political life In this history of American political culture Keith Wailoo examines how pain has defined the line between liberals and conservatives from just after World War II to the present From disabling pain to end of life pain to fetal pain the battle over whose pain is real and who deserves relief has created stark ideological divisions at the bedside in politics and in the courts Beginning with the return of soldiers after World War II and fierce medical and political disagreements about whether pain constitutes a true disability Wailoo explores the 1960s rise of an expansive liberal pain standard along with the emerging conviction that subjective pain was real disabling and compensable These concepts were attacked during the Reagan era when a conservative backlash led to diminished disability aid and an expanding role of courts as arbiters in the politicized struggle to define pain New fronts in pain politics opened nationwide as advocates for death with dignity insisted that end of life pain warranted full relief while the religious right mobilized around fetal pain The book ends with the 2003 OxyContin arrest of conservative talk show host Rush Limbaugh a cautionary tale about deregulation and the widening gaps between the overmedicated and the undertreated

Pain and Chemical Dependency Howard Smith, Steven Passik, 2008-04-25 Both pain and addiction are tremendous public health problems Practitioners of every stripe say that they learned precious little about pain or addiction

in their training and readily admit that instruction on the interface of pain and addiction is nonexistent. The recent problem of prescription drug abuse has only served to highlight the fact that these two worlds need unification: those who treat pain must be informed about the risks of controlled substances and those who treat addiction need to better and more fully understand their benefits. Nowhere is the pooled knowledge of pain management and addiction medicine brought together to allow for a greater appreciation of the risks of addiction when treating people with pain and the pain problems of those with chemical dependency. This major new volume brings this vast knowledge base together, presenting an array of perspectives by the foremost thought leaders at the interface of pain and chemical dependency and is the most comprehensive resource on the subject to date. There have been an increasing number of seminars devoted to this topic and a new society, The International Society on Pain and Chemical Dependency, has recently been formed, and this volume is destined to become the classic text on this multidisciplinary subject. It will appeal to anesthesiologists, neurologists, rehab physicians, palliative care staff, pain center physicians, and psychologists.

Palliative Care Nursing Marianne Matzo, Deborah Witt Sherman, 2006. Annotation: Offering a blend of holistic and humanistic caring coupled with aggressive management of pain and symptoms associated with advanced disease, this resource is organized around 15 competencies in palliative care developed by the American Association of Colleges of Nursing, with each chapter outlining specific skills needed to achieve each competency.

Palliative Care Nursing Deborah Witt Sherman, 2010. This textbook has introduced concepts and methods of education which help to move palliative nursing forward as an evidenced-based practice of whole person care. Betty Ferrell, PhD, FAAN, Research Scientist, from the Foreword: In this comprehensive textbook on palliative care nursing, editors Marianne Matzo and Deborah Witt Sherman succeed in bringing together the heart of nursing and the true meaning of palliative care with the most current evidence-based practice. GeriPal: Palliative care is a philosophy of caregiving that integrates disease modification with supportive, compassionate therapies for patients at the end of life. Palliative care nurses are responsible for alleviating pain and other physical symptoms along with satisfying the emotional, social, cultural, and spiritual needs of patients who are facing life-threatening illness. This third edition of *Palliative Care Nursing* provides more comprehensive, newly updated content, knowledge, attitudes, skills, and cutting-edge teaching and learning strategies to achieve the AACN End of Life nursing competencies, providing a lifespan approach. Now in its third edition, this book continues to emphasize the value of complementary, holistic modalities in promoting health, wholeness, and wellness even as death approaches. Key topics discussed: Ethical aspects of palliative care; Legal aspects of end of life decision making; Loss, suffering, grief, and bereavement on the part of patients and their families; Symptom-specific nursing management of pain, anxiety, depression, fatigue, malnutrition, and dehydration, all common to palliative care; How to communicate with the seriously ill and dying patients, their families, and their health care providers; Disease-specific aspects of palliative care for those battling cancer, heart disease, lung disease, HIV/AIDS, end-stage renal and liver disease, neurological and other disorders. *Soft Tissue Sarcomas*

Raphael E. Pollock, 2002 Part of the acclaimed ACS Atlas of Clinical Oncology series this book offers an expert overview of soft tissue sarcomas. It discusses diagnosis and staging, surgical approaches, radiation therapy, chemotherapy, pediatric sarcomas, and much more. Topics covered include epidemiology, inherited syndromes, biopsy and surgical techniques, external beam irradiation, brachytherapy, intraoperative radiation therapy, neoadjuvant therapy, adjuvant therapy, regional perfusion, pain syndromes, and rehabilitation. *Annals of the Academy of Medicine, Singapore* Academy of Medicine (Singapore), 1994
