Dry Etching For Microelectronics:

Dry Etching for Microelectronics R.A. Powell, 2012-12-02 This volume collects together for the first time a series of in depth critical reviews of important topics in dry etching such as dry processing of III V compound semiconductors dry etching of refractory metal silicides and dry etching aluminium and aluminium alloys This topical format provides the reader with more specialised information and references than found in a general review article In addition it presents a broad perspective which would otherwise have to be gained by reading a large number of individual research papers An additional important and unique feature of this book is the inclusion of an extensive literature review of dry processing compiled by search of computerized data bases A subject index allows ready access to the key points raised in each of the chapters

Dry Etching for VLSI A.J. van Roosmalen, J.A.G. Baggerman, S.J.H. Brader, 2013-06-29 This book has been written as part of a series of scientific books being published by Plenum Press The scope of the series is to review a chosen topic in each volume To supplement this information the abstracts to the most important references cited in the text are reprinted thus allowing the reader to find in depth material without having to refer to many additional publications This volume is dedicated to the field of dry plasma etching as applied in silicon semiconductor processing Although a number of books have appeared dealing with this area of physics and chemistry these all deal with parts of the field This book is unique in that it gives a compact yet complete in depth overview of fundamentals systems processes tools and applications of etching with gas plasmas for VLSI Examples are given throughout the fundamental sections in order to give the reader a better insight in the meaning and magnitude of the many parameters relevant to dry etching Electrical engineering concepts are emphasized to explain the pros and cons of reactor concepts and excitation frequency ranges In the description of practical applications extensive use is made of cross referencing between processes and materials as well as theory and practice It is thus intended to provide a total model for understanding dry etching The book has been written such that no previous knowledge of the subject is required It is intended as a review of all aspects of dry etching for silicon semiconductor processing

Levy,2012-12-06 The primary thrust of very large scale integration VLS is the miniaturization of devices to increase packing density achieve higher speed and consume lower power The fabrication of integrated circuits containing in excess of four million components per chip with design rules in the submicron range has now been made possible by the introduction of innovative circuit designs and the development of new microelectronic materials and processes This book addresses the latter challenge by assessing the current status of the science and technology associated with the production of VLSI silicon circuits It represents the cumulative effort of experts from academia and industry who have come together to blend their expertise into a tutorial overview and cohesive update of this rapidly expanding field A balance of fundamental and applied contributions cover the basics of microelectronics materials and process engineering Subjects in materials science include silicon silicides resists dielectrics and interconnect metallization Subjects in process engineering include crystal growth epitaxy oxidation thin film deposition fine line lithography dry etching ion implantation and diffusion Other related topics such as process simulation defects phenomena and diagnostic techniques are also included This book is the result of a NATO sponsored Advanced Study Institute AS held in Castelvecchio Pascoli Italy Invited speakers at this institute provided manuscripts which were edited updated and integrated with other contributions solicited from non participants to this AS

Passive Micro-Optical Alignment Methods Robert A. Boudreau, Sharon M. Boudreau, 2018-10-03 The most expensive phase in the manufacture of micro optical components and fiber optics is also one of the most performance critical optical alignment of the components The increasing degree of miniaturization makes this an especially challenging task Active alignment methods result in higher costs and awkward processes and for some applications they simply are not possible Passive Micro Optical Alignment Methods introduces the passive alignment methods that are currently available and illustrates them with many examples references and critiques The first book dedicated to passive alignment it begins with an overview of the current activities requirements and general results of passive optical alignments followed by three sections of in depth analysis The first of these discusses mechanical passive alignment highlighting silicon waferboard solder and Jitney technologies as well as application of mechanical alignment to 3D free space interconnects The next section describes the various visual alignment techniques applied to Planar Lightwave Circuits PLCs and low cost plastic and surface mount packaging The final section details various utilities that aid passive alignment and their resulting tradeoffs and demonstrates Monte Carlo analysis to evaluate the potential of a given method Passive Micro Optical Alignment Methods provides the tools necessary to meet the challenge of precision and low cost alignment for applications that require micron or sub micron tolerance

Fundamentals of Semiconductor Processing Technology Badi El-Kareh, Lou N. Hutter, 2012-12-06 The drive toward new semiconductor technologies is intricately related to market demands for cheaper smaller faster and more reliable circuits with lower power consumption The development of new processing tools and technologies is aimed at optimizing one or more of these requirements This goal can however only be achieved by a concerted effort between scientists engineers technicians and operators in research development and manufacturing It is therefore important that experts in specific disciplines such as device and circuit design understand the principle capabilities and limitations of tools and processing technologies It is also important that those working on specific unit processes such as lithography or hot processes be familiar with other unit processes used to manufacture the product Several excellent books have been published on the subject of process technologies These texts however cover subjects in too much detail or do not cover topics important to modern technologies This book is written with the need for a bridge between different disciplines in mind It is intended to present to engineers and scientists those parts of modern processing technologies that are of greatest importance to the design and manufacture of semiconductor circuits The material is presented with sufficient detail to understand and analyze interactions between processing and other semiconductor disciplines such as design of devices and circuits their electrical parameters reliability and yield
