

HOW THE SEED PROCESS

Step 1

**Harvest the dry seed pods
in our Los Angeles Farm**

Step 2

**Extract seeds from dry pods
and scarify them by blender to
break the seed coat for faster,
higher germination rates.**

Step 3

**Sort out the seeds for planting;
they are hard and small, with
most already scarified,
ensuring quick and high
germination rates.**

Honey Sources Eva Crane, Penelope Walker, 1986 **Honey Sources Satellite, 6** Eva Crane, Penelope Walker, 1986

Plants for Arid Lands G.E. Wickens, David. V. Field, Joe R. Goodin, 2012-12-06 Economic plants have been defined by SEPASAT as those plants that are utilised either directly or indirectly for the benefit of Man Indirect usage includes the needs of Man s livestock and the maintenance of the environment the benefits may be domestic commercial or aesthetic Economic plants constitute a large and so far uncalculated percentage of the quarter of a million higher plants in the World today However it has been calculated that 10% 25 000 of these species are now on the verge of extinction and extinction means that a genetic resource that could be of benefit to Man will be lost for ever Furthermore for every species lost an estimated 10 30 other dependent organisms are also doomed Fewer than 1 per cent of the World s plants have been sufficiently well studied for a true evaluation of the potential floral wealth awaiting discovery not only in the rain forests which man is now actively destroying at a rate of 20 ha a minute but also in the very much neglected dry areas of the World

Honey and pollen flora of South-Eastern Australia Dr. Douglas Somerville, 2020-01-14. This PDF book is best viewed on a desktop or tablet, not a phone, due to the size of the pages. The quality of the book is best in the Play Books app, not through the Google Play web store and library. However, please understand that the pages will be around 50% of the size of the hardcover print edition and may be easier to read when zoomed in. The PDF can be saved offline but cannot be saved to your computer and opened in Adobe Acrobat, copied and shared, or printed in full. It will remain in the Google app or library.

Understanding the biology of flora and its value to honey bees is the core foundation for successful beekeeping. Bees feed on nectar and pollen. No food equals no bees. The flowers on which bees forage have a major impact on stocking rates and the level of nutrition available to the colony, two subjects that need to be understood for a beekeeper to be successful. Whether a beekeeper owns one hive or a thousand, the principle is the same. Floral resources within Australia underpin so many systems and animal species. Building knowledge and understanding of what they are and how they are adapting to a changing climate is a critical field of scientific endeavour. This publication is part of the journey to focus on the value of plants to nectarivores and honey bees in particular. The result of over 30 years of research, it distils both scientific knowledge and the opinions of hundreds of beekeepers into a reference work that will be the cornerstone of floral understanding in apiculture for years to come.
