## **Drug Development Molecular Targets For Gastrointestinal Diseases:**

**Drug Development** Timothy S. Gagarella, Antonio Guglietta, 1999-09-01 The application of molecular techniques to gastroenterology continues to yield important advances in the development of drugs to treat gastrointestinal disorders. Important new drugs have emerged through the collaborative and complementary efforts of basic scientists, clinicians, and clinical researchers in academia and the pharmaceutical industry. The challenge has been exciting with a few surprises along the way. Consider peptic ulcer disease as an example. The discovery of H<sub>2</sub> receptors and the availability of potent and selective H<sub>2</sub> receptor antagonists signaled the beginning of a new era in the treatment of gastric hypersecretory states and peptic ulcers. Introduction of proton pump inhibitors offered another therapeutic option. Though H<sub>2</sub> receptor antagonists and proton pump inhibitors are important and useful drugs, the discovery of the link between H. pylori infection and peptic ulcer disease has led to even more effective pharmacotherapeutic regimens. Our intent in *Drug Development Molecular Targets for GI Diseases* is to bring together hands-on experts to review promising areas of gastrointestinal pharmacology. The contemporary topics covered from a mechanistic viewpoint are relevant to gastrointestinal inflammation and motility disorders. Authoritative opinions are offered on both future research directions and potential applications for new therapies.

*Walker's Pediatric Gastrointestinal Disease* Ronald E. Kleinman, Olivier-Jean Goulet, Giorgia Mieli-Vergani, Ian R. Sanderson, Philip M. Sherman, Benjamin L. Shneider, 2018-06-04 *Pediatric Gastrointestinal Disease* W. Allan Walker, 2004 This new edition of *Pediatric Gastrointestinal Disease* is dedicated to the maintenance of a comprehensive approach to the practice of Pediatric Gastroenterology. Considered to be the definitive reference work, this fourth edition has been extensively reviewed. As a result, the size and content of various sections have been modified, and new *Pharmacotherapy of Gastrointestinal Inflammation* Antonio Guglietta, 2012-12-06 In recent years, the area of pharmacotherapy of GI inflammation has witnessed important progress with new drugs and therapeutic approaches being introduced. The volume reviews the pharmacotherapy of selected gastrointestinal inflammatory conditions chosen on the basis of their clinical importance and the areas where important and exciting progress has been made recently. Besides discussing current pharmacotherapy to treat the most important GI inflammation conditions, the book also indicates possible future therapeutic avenues likely to become available in a few years. The book is of interest to various sectors of the scientific community ranging from clinicians to pharmacologists and from biochemists to microbiologists who will find it a useful tool for their clinical practice and research activity. *Drug Development* Timothy S. Gagarella, Antonio Guglietta, 2000 *Molecular Pathology of Neoplastic Gastrointestinal Diseases* Antonia R. Sepulveda, John P. Lynch, 2013-01-28 *Molecular Pathology of Neoplastic Gastrointestinal Diseases* reviews the molecular aspects that characterize the spectrum of neoplastic conditions that affect the gastrointestinal tract, providing the reader with current up-to-date knowledge. For each disease entity, chapters provide reviews on the molecular basis of the individual disease, molecular testing approaches currently available or in development.

for diagnosis or for gene target characterization for selective targeted therapies recommended guidelines for clinical application of molecular tests are included whenever available molecular testing for hereditary predisposition or disease risk animal models and cell culture models of disease      *Advances in Novel Drugs and Targets for Hepatic and Gastrointestinal Diseases* Yong Gao,Aijun Qiao,Xiaoying Yang,2024-01-29 The global incidence of gastrointestinal and hepatic diseases has been gradually increasing in recent years which seriously threatens human health and increases the economic burden More importantly gastrointestinal and hepatic malignancies have the highest incidence and mortality rates among all tumors such as liver cancer stomach cancer colon cancer and pancreatic cancer There are also non neoplastic diseases such as viral hepatitis cirrhosis nonalcoholic steatohepatitis chronic atrophic gastritis ulcerative colitis and reflux esophageal disease that also affect patients quality of life Although progress has been made in the pathogenesis of gastrointestinal and hepatic diseases and corresponding therapeutic drugs have been also developed the specific mechanisms of the diseases are still not revealed and there is a lack of specific drugs In view of this this topic aims to explore new molecular mechanisms of pathogenesis and potential therapeutic agents and pharmacological effects of gastrointestinal and hepatic diseases

Smalley,2012-09-26 For this volume of *Advances in Pharmacology* we have brought together some of the foremost basic science and clinical researchers to discuss some of the new frontiers in the development of targeted cancer therapy Although still in its formative stages the development of targeted cancer therapies has already shown incredible promise in a limited number of cancer types As basic cancer research and drug development continues we expect this number to grow and more patients to benefit from these exciting advances Through better patient selection and novel strategies to manage resistance a future can be envisaged in which cancer can be reduced to the level of a chronic manageable disease Brought together some of the foremost basic science and clinical researchers Part of the renowned *Advances in Pharmacology* Serial Discussion of some of the new frontiers in the development of targeted cancer therapy *Drug Development for Parasite-induced*

*Diarrheal Diseases* Anjan Debnath,James H. McKerrow,2017-08-25 One of the top four contributors to the global burden of disease is diarrheal infections Intestinal parasites are major causes of morbidity and mortality associated with diarrheal diseases in both the developed and developing world Amebiasis is responsible for 50 million cases of invasive disease and 70 000 deaths annually in the world Giardiasis has an estimated worldwide prevalence of 280 million cases annually In developed countries *Giardia lamblia* infects about 2% of adults and 6 8% of children The prevalence of *G lamblia* infection is generally higher in developing countries ranging from 3% to 90% Furthermore giardial infections contribute substantially to the 2 5 million annual deaths from diarrheal disease In Asia Africa and Latin America about 500 000 new giardiasis cases are reported each year *Cryptosporidium* accounts for 20% and 9% of diarrheal episodes in children in developing and developed countries respectively Infection with *Cryptosporidium* can be chronic and especially debilitating in immunosuppressed individuals and malnourished children A recent study to measure disease burden based on disability adjusted life years DALYs found that cryptosporidiosis and amebiasis produce about 10 6 million DALYs This exceeds the DALYs of any helminth infection currently being targeted by the World Health Organization for preventive chemotherapy Because of its link with

poverty Giardia and Cryptosporidium were included in the WHO Neglected Diseases Initiative in 2004 *E. histolytica*, *G. lamblia* and *C. parvum* have been listed by the National Institutes of Health (NIH) as category B priority biodefense pathogens due to low infectious dose and potential for dissemination through compromised food and water supplies in the United States. Despite the prevalence of amebiasis, giardiasis and cryptosporidiosis, there are no vaccines or prophylactic drugs. The first line drugs for invasive amebiasis and giardiasis chemotherapy are nitroimidazoles, with the prototype metronidazole being the most common drug used worldwide. Metronidazole has been shown to be both mutagenic in a microbiological system and carcinogenic to rodents and frequently causes gastrointestinal side effects. In spite of the efficacy of nitroimidazole drugs, treatment failures in giardiasis occur in up to 20% of cases. Clinical resistance of *G. lamblia* to metronidazole is proven and cross resistance is a concern with all commonly used anti-giardial drugs. Nitazoxanide, the only FDA approved drug for the treatment of cryptosporidiosis, is effective in the treatment of immunocompetent patients and partially effective for immunosuppressed patients. Therefore, it is critical to search for more effective drugs to treat amebiasis, giardiasis and cryptosporidiosis. This Research Topic for Frontiers in Microbiology will explore the recent progress in drug development for parasitic diarrheal diseases. This includes an understanding of drug resistance mechanisms. We would also welcome submissions on the drug development for other diarrheal parasites. We hope that this research topic will include a comprehensive survey of various attempts by the parasitology research community to create effective drugs for these diseases.
