International Handbook of Migration, Minorities and Education Zvi Bekerman, Thomas Geisen, 2011-10-06 Migrants and minorities are always at risk of being caught in essentialized cultural definitions and being denied the right to express their cultural preferences because they are perceived as threats to social cohesion Migrants and minorities respond to these difficulties in multiple ways as active agents in the pedagogical political social and scientific processes that position them in this or that cultural sphere On the one hand they reject ascribed cultural attributes while striving towards integration in a variety of social spheres e g school and workplace in order to achieve social mobility On the other hand they

articulate demands for cultural self determination This discursive duality is met with suspicion by the majority culture For societies with high levels of migration or with substantial minority cultures questions related to the meaning of cultural heterogeneity and the social and cultural limits of learning and communication e g migration education or critical multiculturalism are very important It is precisely here where the chances for new beginnings and new trials become of great importance for educational theorizing which urgently needs to find answers to current questions about individual freedom community cultural affiliations and social and democratic cohesion Answers to these questions must account for both political and learning perspectives at the macro mezzo and micro contextual levels The contributions of this edited volume enhance the knowledge in the field of migrant minority education with a special emphasis on the meaning of culture and social learning for educational processes

The Qualitative-Quantitative Distinction in the Social Sciences B. Glassner, J.D. Moreno, 2013-11-27 Without of course adopting a Platonic metaphysics the eighteenth century philosophes were Grecophiles who regarded the Athenian philosophers as their intellectual forbearers and mentors So powerful was their identification with classification that ancient ideas were taken as keys to the design of the modern

world but usually the ideas were taken separately and as divided from their systematic context The power of number was an idea the Enlightenment thinkers deployed with their legendary passion and vigor particularly as an instrument for social reconstruction It is no exaggeration to say that the role of quantities in contemporary social scientific theorizing cannot be understood with any depth absent a recollection of the philosophes axial development of the notion of quantification It is a commonplace that for the philosophes progress required releasing human abilities to have power over nature A prerequisite for this power was knowledge of the underlying causes of natural events knowledge that required quantitative precision Enlightenment thinkers were sufficiently aware of themselves as products of their time to appreciate the importance of a liberal social environment to the knowledge enterprise the supposition that the reverse is also the case that enhanced knowledge could advance social conditions came easily
