Milk and Milk Products Alan H. Varnam, 2012-12-06 Milk has been an important food for man since the domestication of cattle and the adoption of a pastoralist agriculture It is also the most versatile of the animal derived food commodities and is a component of the diet in many physical forms In addition to milk itself a rural technology evolved which permitted the manufacture of cheese fermented milks cream and butter At a later date successive advances in technology were exploited in the manufacture of ice cream concentrated and dried milks and at a later date of ultra heat treated dairy products new dairy desserts and new functional products At the same time however dairy products have been increasingly perceived as unhealthy foods and a number of high quality dairy substitutes or analogues have been developed which have made significant inroads into the total dairy food market Paradoxically perhaps the technology which on the one hand presents a threat to the dairy industry through making possible high quality substitutes offers on the other hand an opportunity to exploit new uses for milk and its components and to develop entirely new dairy products Further the development of products such as low fat dairy spreads has tended to blur the distinction between the dairy industry and its imitators and further broadened the range of knowledge required of dairy scientists and technologists **Grade A Dry Milk Products**
