Horwitz, PhD, Jerome C. Wakefield, 2012-06 Thirty years ago it was estimated that less than five percent of the population had an anxiety disorder Today some estimates are over fifty percent a tenfold increase Is this dramatic rise evidence of a real medical epidemic In *All We Have to Fear* Allan Horwitz and Jerome Wakefield argue that psychiatry itself has largely generated this epidemic by inflating many natural fears into psychiatric disorders leading to the over diagnosis of anxiety disorders and the over prescription of anxiety

reducing drugs American psychiatry currently identifies disordered anxiety as irrational anxiety disproportionate to a real threat Horwitz and Wakefield argue to the contrary that it can be a perfectly normal part of our nature to fear things that are not at all dangerous from heights to negative judgments by others to scenes that remind us of past threats as in some forms of PTSD Indeed this book argues strongly against the tendency to call any distressing condition a mental disorder To counter this trend the authors provide an innovative and nuanced way to distinguish between anxiety conditions that are psychiatric disorders and likely require medical treatment and those that are not the latter including anxieties that seem irrational but are the natural products of evolution The authors show that many commonly diagnosed irrational fears such as a fear of snakes strangers or social evaluation have evolved over time in response to situations that posed serious risks to humans in the past but are no longer dangerous today Drawing on a wide range of disciplines including psychiatry evolutionary psychology sociology anthropology and history the book illuminates the nature of anxiety in America making a major contribution to our understanding of mental health      *Abnormal Psychology* Ann M. Kring, Sheri L. Johnson, 2018-01-09

*Abnormal Psychology* The Science and Treatment of Psychological Disorders consists of a balance and blending of research and clinical application the use of paradigms as an organizing principle and involving the learner in the kinds of real world problem solving engaged in by clinicians and scientists Students learn that psychopathology is best understood by considering multiple perspectives and that these varying perspectives provide the clearest accounting of the causes of these disorders as well as the best possible treatments      **Taking Sides** Richard P. Halgin, 2005 Contains a collection of twenty debates representing arguments of leading psychologists and commentators on such topics as alcohol abuse multiple personality disorder ADD and ADHD antidepressants and social issues
