Space Science L. K. Harra, Keith O. Mason, 2004 Provides an introduction to space science *Astronomy and Astrophysics* National Research Council, Division on Engineering and Physical Sciences, Space Science Board, Task Group on Astronomy and Astrophysics, 1988-02-01 [Astrophysics, Astronomy and Space Sciences in the History of the Max Planck Society](#) Luisa Bonolis, Juan-Andres Leon, 2022-12-05 This book provides the first comprehensive historical account of the evolution of scientific traditions in astronomy astrophysics and the space sciences within the Max Planck Society Structured with in depth archival research interviews with protagonists unpublished photographs and an extensive bibliography it follows a unique history from the post war relaunch of physical sciences in West Germany to the spectacular developments and successes of cosmic sciences in the second half of the 20th century up to the emergence of multi messenger astronomy It reveals how the Society acquired national and international acclaim in becoming one of the world s most productive research organizations in these fields **Reference Frames** Jean Kovalevsky, Ivan I. Mueller, Barbara Kolaczek, 2012-12-06 This book on reference systems is the first comprehensive review of the problem of celestial and terrestrial reference systems and frames Over 20 years the importance of this problem emerged slowly as the accuracy of new observational techniques improved The topic has already been approached in several symposia such as Stresa 1967 Morioka 1971 Perth 1973 Columbus 1975 1978 and 1985 Kiev 1977 and San Fernando 1978 Two IAU colloquia held in Turin 1974 and in Warsaw 1980 were exclusively devoted to discuss reference systems During this time the problem of terrestrial and celestial reference systems has been discussed also in many astronomical and geodetic symposia but always among other topics Thus a review devoted solely to the definition and practical realization of such systems was needed It is hoped that this book containing modern comprehensive reviews of important facets of this problem will contribute not only to a better and wider understanding of the mathematics and the physics that are behind the concepts and the realizations but also to future development in a field that can only expand with the rapidly increasing accuracy of geodetic and astronomical observations We are pleased to thank all the authors of the book who have enthusiastically agreed to contribute to the book in their field of competence and have gracefully accepted guidance from the editors in the definition of the subject and of the interfaces with other chapters We thank Prof Y **Space Science & Applications Notice** ,1986 **Space Science in China** Wen-Rui Hu, 2022-04-18 Space science in China is one of the most active areas in modern science and China has played a dynamic and steadily increasing role in this field since the 1960s Until recently however activity in China was a mystery to the rest of the world With the commercial importance of space and the fact that space is now used as a laboratory to carry out various experiments China has recently emerged as an important international competitor Space Science in China provides a clear understanding of the latest research and progress in such wide ranging areas as the development and research in solar terrestrial science space astronomy geoscience remote sensing microgravity science and life science

The Century of Space Science J.A. Bleeker, Johannes Geiss, M. Huber, 2012-12-06 One of the most attractive features of the young discipline of Space Science is that many of the original pioneers and key players involved are still available to describe their field. Hence at this point in history we are in a unique position to gain first hand insight into the field and its development. To this end *The Century of Space Science* a scholarly authoritative reference book presents a chapter by chapter retrospective of space science as studied in the 20th century. The level is academic and focuses on key discoveries, how these were arrived at, their scientific consequences and how these discoveries advanced the thoughts of the key players involved. With over 90 world class contributors such as James Van Allen, Cornelis de Jager, Eugene Parker, Reimar Lüst and Ernst Stuhlinger and with a Foreword by Lodewijk Woltjer, past ESO Director General, this book will be immensely useful to readers in the fields of space science, astronomy and the history of science. Both academic institutions and researchers will find that this major reference work makes an invaluable addition to their collection. **Priorities in Space Science**

Enabled by Nuclear Power and Propulsion National Research Council, Division on Engineering and Physical Sciences, Aeronautics and Space Engineering Board, Space Studies Board, Committee on Priorities for Space Science Enabled by Nuclear Power and Propulsion, 2006-03-20 In 2003 NASA began an R D effort to develop nuclear power and propulsion systems for solar system exploration. This activity, renamed Project Prometheus in 2004, was initiated because of the inherent limitations in photovoltaic and chemical propulsion systems in reaching many solar system objectives. To help determine appropriate missions for a nuclear power and propulsion capability, NASA asked the NRC for an independent assessment of potentially highly meritorious missions that may be enabled if space nuclear systems became operational. This report provides a series of space science objectives and missions that could be so enabled in the period beyond 2015 in the areas of astronomy and astrophysics, solar system exploration and solar and space physics. It is based on but does not reprioritize the findings of previous NRC decadal surveys in those three areas.
