Cybersecurity in Robotic Autonomous Vehicles Ahmed Alruwaili, Sardar M.

N. Islam, Iqbal Gondal, 2025-03-21 *Cybersecurity in Robotic Autonomous Vehicles* introduces a novel intrusion detection system IDS specifically designed for AVs which leverages data prioritisation in CAN IDs to enhance threat detection and mitigation. It offers a pioneering intrusion detection model for AVs that uses machine and deep learning algorithms. Presenting a new method for improving vehicle security, the book demonstrates how the IDS has incorporated machine learning and deep learning frameworks to analyse CAN bus traffic and identify the presence of any malicious activities in real time with a high level of accuracy. It provides a comprehensive examination of the cybersecurity risks faced by AVs with a particular emphasis on CAN vulnerabilities and the innovative use of data prioritisation within CAN IDs. The book will interest researchers and advanced undergraduate students taking courses in cybersecurity, automotive engineering and data science. Automotive industry and robotics professionals focusing on Internet of Vehicles and cybersecurity will also benefit from the contents.

The Reputational Premium Paul M. Sniderman, Edward H. Stiglitz, 2012-07-22 *The Reputational Premium* presents a new theory of party identification, the central concept in the study of voting. Challenging the traditional idea that voters identify with a political party out of blind emotional attachment, this pioneering book explains why party identification in contemporary American politics enables voters to make coherent policy choices. Standard approaches to the study of policy based voting hold that voters choose based on the policy positions of the two candidates competing for their support. This study demonstrates that candidates can get a premium in support from the policy reputations of their parties. In particular, Paul Sniderman and Edward Stiglitz present a theory of how partisans take account of the parties' policy reputations as a function of the competing candidates' policy positions. A central implication of this theory of reputation centered choices is that party identification gives candidates tremendous latitude in their policy positioning. Paradoxically, it is the party supporters who understand and are in synch with the ideological logic of the American party system who open the door to a polarized politics precisely by making the best informed choices on offer.

Cataloging with AACR2 and MARC21 Deborah A. Fritz, 2007 Recent changes in both cataloging rules AACR2 and MARC coding standards MARC21 mean that for catalogers to create or edit records effectively they need new up to date guidance. In a unique one stop guide, cataloging expert Fritz provides the hands on cross references between AACR2 and MARC21 required for easy online cataloging. The 2006 Cumulation brings the second edition up to date with the inclusion of the 2004, 2005 and 2006 updates. Designed to streamline the process and avoid errors, the book is organized in order of MARC tags. Following this step by step guide, users can identify the rules that govern each MARC field, match resources to records, edit records, create new records easily, clone records for different editions, make individual MARC records play well with others in the database. Beginning catalogers can use this guide to create simple records while experienced catalogers will be able to identify specific rules. Fritz also helps copy catalogers pick better matching records and systems librarians understand the content of records at the core of their collections. Providing clear practical easy to use guidance, this authoritative reference is the premier resource for students.
