Sepúlveda-Pedro,2023-01-01 This book aims to enrich our understanding of the role the environment plays in processes of life and cognition from the perspective of enactive cognitive science Miguel A Sep lveda

Pedro offers an unprecedented interpretation of the central claims of the enactive approach to cognition supported by contemporary works of ecological psychology and phenomenology The enactive approach conceives cognition as sense making a phenomenon emerging from the organizational nature of the living body that evolves in human beings through sensorimotor intercorporeal and linguistic interactions with the environment From this standpoint Sep lveda Pedro suggests incorporating three new theses into the theoretical body of the enactive approach sense making and cognition fundamentally consist of processes of norm development the environment cognitive agents actually interact with is an active ecological field enacted in their historical past and sense making occurs in a domain consisting of multiple normative dimensions that the author names enactive place **Mobile Agents** A.
