## **Aging China The Demographic Challenge To Chinas Economic Prospects:**

**Aging China** Robert Stowe England, 2005-02-28 China the world's most populous nation will enter a period of rapid aging very shortly that will redefine that country Between 2010 and 2040 the portion of people 65 and older will rise from around 7% to between 25 and 30% of the population As China ages can it retain the youthful dynamism now driving it China the world's most populous nation will enter a period of rapid aging very shortly that will redefine that country Between 2010 and 2040 the number of people 65 and older will rise from around 7% to between 25 and 30% of the population As China ages can it retain the youthful dynamism now driving it This book is an effort to try to capture the broad outlines of the significant economic market social and demographic factors that will shape the future of China and the role that aging will play in the whole mix of influences Aging in developed societies and economies has been widely studied In such nations as Japan Germany Italy and Spain for example we know that as populations age their societies decline leaving fewer younger workers to support the growing number of people who will become dependent on costly health care systems or whose basic needs such as food and shelter will need to be subsidized But less work has been done in assessing the potential impact of aging in developing countries where the majority of people may be working poor not middle class as in the case of China As China restructures its economy the old benefits packages previously available to urban workers and not rural workers are being replaced by a patchwork of benefits across a wide range of enterprises *Wto Accession and Socio-Economic*

*Development in China* Parikshit Basu, Yapa Bandara, 2009-06-15 This book reviews how China's accession to the WTO has impacted upon its education environment economic and social outcomes in recent years It has been argued that China's rapid growth in output and exports and subsequent accession to WTO has significantly increased income and therefore the well being of the Chinese population However doubts are now being raised that higher income is generated at the cost of deteriorating environmental and social standards which has increasingly affected the health of the Chinese people especially those who live in major industrial cities Also there is a widespread perception that its accession to WTO has significantly increased social shocks especially among the farming community and contributed to poor health outcomes among the rural population These issues are critically analysed in this book by experienced academics from China and Australia Includes contributions from Australian and Chinese scholars and thus brings together ideas and suggestions from a broad range of perspectives Analyses China's socio economic challenges from a multi dimensional focus A very useful reference in WTO issues in general and China in particular **Ageing in East Asia** Tsung-hsi Fu, Rhidian Hughes, 2009-02-13 Ageing

[Forecasting China's Future](#) Roger Irvine,2015-06-26 China's future development is likely to have a huge impact on twenty first century global outcomes It is therefore surprising that thus far so little attention has been given to comparing and evaluating expert forecasts of China's future in the post Mao era This book presents an illuminating and comprehensive summary record of contrasting and competing expert forecasts and judgements about the major issues confronting China within four principal domains political economic environmental and international After considering the principal forecasting methods available to experts the author comments critically on the degree of success achieved in using those methods and emphasises the confusion created by the polarisation of opinion and by the failure of many experts to accept the high degree of uncertainty that characterises most of the key issues The book recommends a new approach based on the study of a hierarchy of critical uncertainties and on continuing analysis of opposing expert opinions about these uncertainties It emphasises the potential for both positive and negative outcomes for these critical uncertainties and the importance of maximising the potential for positive outcomes through improved analytical and policy frameworks Providing insights for specialists and non specialists into the most critical issues that will determine China's future direction this book will be of particular interest to students and scholars of political economic environmental and international relations issues in China and Asia as well as to readers in business and government

emphasize that such competition may lead to a race to the bottom in terms of eroding government revenues redistributing wealth from workers to capitalists and limiting democracy by forcing politicians to prioritize international investment capital rather than working for their voters In this volume however many of the essays draw attention to the positive learning and information effects The contributors conclude that competition may actually lead to institutions becoming more efficient in allocating resources Students and scholars of economics political economy international relations and political science will find the book s non traditional take on institutional competition a must read as will policy analysts and those with an interest in taxation and welfare states
