Culture in Clinical Care Bette Bonder, Laura Martin (PhD.), Andrew W. Miracle, 2002. Defines and describes culture and its interaction with individual experience and personality in the development of beliefs, values, and actions. Information about cultural beliefs related to health and wellness are explored as they affect intervention strategies. Based on ethnographic methods, mechanisms for culturally sensitive assessment and intervention are considered. The text goes beyond traditional fact-centered approaches, taking the perspective that culture is emergent in individuals as they interact with the physical and social environment. The book fills a niche in the health professions programs because of its theoretical approach, its emphasis on strategies and methods for clinical interventions, and its importance of strategies for practice and self-assessment.
