Mobbs,2001-01-11 Some well known age related neurological diseases include Parkinson s disease Alzheimer s disease deafness and blindness Even more common are the problems of aging which are not due to disease but to more subtle impairments in neurobiological systems including impairments in vision memory loss muscle weakening and loss of reproductive functions changes in body weight and sleeplessness As the average age of our society increases diseases of aging continue to become more common and conditions associated with aging need more attention by doctors and researchers In 1991 patients over the age of 65 saw their doctors an average of eight times per year Research funding is provided by the Neuroscience and Neuropsychology of Aging NNA Program which is run by the National Institute on Aging This book offers a comprehensive overview of all topics related to functional impairments which are related to the aging brain and nervous system It is organized according to four general functions movement senses memory and neuroendocrine regulation Written by the leading researchers in the field this comprehensive work addresses both impairments associated with diseases and not associated with diseases making it easier to understand the mechanisms involved Functional Neurobiology of Aging is an important reference for professionals and students involved in aging research as well as physicians who need to recognize and understand age related impairments Organized by function making it easy to find and understand the material Addresses impairments both associated with diseases and not associated with diseases Written by leading researchers in the field Most comprehensive source of information on the neurobiology of aging

Knobil and Neill's Physiology of Reproduction Tony M. Plant,Anthony J. Zeleznik,2014-11-15 The Fourth Edition of Knobil Neill continues to serve as a reference aid for research to provide the historical context to current research and most importantly as an aid for graduate teaching on a broad range of topics in human and comparative reproduction In the decade since the publication of the last edition the study of reproductive physiology has undergone monumental changes Chief among these advances are in the areas of stem cell development signaling pathways the role of inflammation in the regulatory processes in the various tissues and the integration of new animal models which have led to a greater understanding of human disease The new edition synthesizes all of this new information at the molecular cellular and organismal levels of organization and present modern physiology a more understandable and comparative context The Fourth Edition has been extensively revised reflecting new fundamental advancements in this rapidly advancing field Provides a common language for researchers across the fields of physiology endocrinology and biology to discuss their understanding of reproduction Saves academic researchers time in quickly accessing the very latest details on reproductive physiology as opposed to searching through thousands of journal articles Knobil and Neill's Physiology of Reproduction

Ernst Knobil, Jimmy D. Ellison, 2017-09-04 The study of human reproductive ecology represents an important new development in human evolutionary biology Its focus is on the physiology of human reproduction and evidence of adaptation and hence the action of natural selection in that domain But at the same time the study of human reproductive ecology provides an important perspective on the historical process of human evolution a lens through which we may view the forces that have shaped us as a species In the end all actions of natural selection can be reduced to variation in the reproductive success of individuals Peter Ellison is one of the pioneers in the fast growing area of reproductive ecology He has collected for this volume the research of thirty one of the most active and influential scientists in the field Thanks to recent noninvasive techniques these contributors can present direct empirical data on the effect of a broad array of ecological behavioral and constitutional variables on the reproductive processes of humans as well as wild primates Because biological evolution is cumulative however organisms in the present must be viewed as products of the selective forces of past environments The study of adaptation thus often involves inferences about formative ecological relationships that may no longer exist or not in the same form Making such inferences depends on carefully weighing a broad range of evidence drawn from studies of contemporary ecological variation comparative studies of related taxonomies and paleontological and genetic evidence of evolutionary history The result of this inquiry sheds light not only on the functional aspects of an organism's contemporary biology but also on its evolutionary history and the selective forces that have shaped it through time Encompassing a range of viewpoints controversy along with consensus this far ranging collection offers an indispensable guide for courses in biological anthropology human biology and primatology along with Huether and McCance's Understanding Pathophysiology, Canadian Edition - E-Book Kelly Power-Kean, Stephanie Zettel, Mohamed Toufic El-Hussein, Sue E. Neuroendocrinology of Aging Joseph Meites, 2012-12-06 JOSEPH MEITES The idea that the endocrine system is involved in aging processes is as old as the beginnings of endocrinology The first endocrine experiment related to aging was reported by Brown Sequard who is usually regarded as the father of endocrinology In 1889 at the age of 72 years he reported that he had succeeded in rejuvenating himself by injections of testicular extracts from dogs and guinea pigs Although the favorable effects observed may have been due mainly to the powers of auto suggestion his reports created a considerable interest in endocrinology and its relation to aging and eventually led to the use of estrogens for treating certain pre and postmenopausal symptoms in women and androgens for treating some symptoms in aging men Up to about the 1960 s the relatively few studies on endocrine aging relationships dealt mainly with changes in weight and histological appearance of endocrine organs in aging animals and human subjects and included a limited number of measurements of endocrine function by bioassays and chemical for steroids procedures Within these limitations gerontological investigators were unable to establish any definite relationships between endocrine functions and aging processes with the exception of the connection between reproductive decline and gonadal and pituitary activity Textbook of Men's Health and Aging Bruno

Lunenfeld, Louis JG Gooren, Alvaro Morales, John Morley, 2007-12-20 The first edition of Textbook of Men's Health did much to establish and define the scope of the emerging subspecialty of aging men's health This revised and updated edition with new sections on basic sciences and sexual dysfunction has a small but significant change of approach reflected in the new title

The central mission of the new edition **Genetic and Molecular Analysis of the Reproductive System's Effect on Aging**

in Caenorhabditis Elegans Jennifer R. Berman, 2005 Finally we further explore the role of daf 12 on lifespan and thermotolerance as well as examine the effects of environmental perturbation on the lifespan of germline deficient animals
