Agricultural Ethics - An Invitation Robert L. Zimdahl, 2020-08-13 I write because I am concerned that I and my agricultural colleagues have avoided addressing the moral dimension of the environmental and social problems we have contributed to I hope for an exchange of ideas about agriculture's moral dilemmas I encourage my readers to engage in a collective conversation about the dilemmas and avoid remaining in what Merton calls the collective arrogance and despair of his own herd If those engaged in agriculture continue to ignore and fail to realize our common difficulties they will be addressed and resolved by societal pressure and political action which may not yield the resolution we favor The book's goal is not to resolve the moral dilemmas raised It is to raise them and encourage thought and discussion It will ask but not answer why nearly all involved in agriculture have not addressed the moral concerns voiced by the general public The agricultural enterprise is committed to the benefits and future success of the present very productive chemical capital and energy intensive system which is in the minds of many not sustainable The internal justification invokes the moral claim that they feed the world's population The question remains whether or not the prevailing moral justification of feeding the world is adequate given all the issues modern developed country agriculture faces pesticides in soil water and food cruelty to animals Biotech GMO's corporate agriculture pollution by animal factory waste exploitation of and cruelty to migrant labor

Ethical futures: bioscience and food horizons Kate Millar, Pru Hobson West, Brigitte Nerlich, 2023-09-04 In an ever changing interconnected world the agriculture and food system faces constant challenges in many forms such as the impacts of climate change uncertainty surrounding the use of novel technologies and the emergence of new zoonotic diseases Alongside these challenges professionals working in the food system are faced with opportunities to improve food production and distribution As decision makers attempt to balance these threats and opportunities in order to secure more sustainable production systems the key question that arises is What do we envisage as the future for agriculture and food production With numerous voices advocating different and sometimes conflicting approaches ranging from organic farming to wider use of GMOs through in vitro meat production this discussion of the future raises significant ethical questions The contributions in this book bring together a diverse group of authors who explore a set of themes relating to the ethical dimensions of the agriculture and food futures including the role of novel technologies the potential issues raised by the use of biofuels the ethics of future animal production systems concepts of global food security as well as chapters on food governance priorities and educational aspects It is intended that this volume serves as an interesting collection and acts as a source of stimulation

that will contribute to wider debate and reflection on the future of the agriculture and food system Scripture, Culture, and Agriculture Ellen F. Davis, 2008-10-13 This book examines the theology and ethics of land use especially the practices of modern industrialized agriculture in light of critical biblical exegesis Nine interrelated essays explore the biblical writers pervasive concern for the care of arable land against the background of the geography social structures and religious thought of ancient Israel This approach consistently brings out neglected aspects of texts both poetry and prose that are central to Jewish and Christian traditions Rather than seeking solutions from the past Davis creates a conversation between ancient texts and contemporary agrarian writers thus she provides a fresh perspective from which to view the destructive practices and assumptions that now dominate the global food economy The biblical exegesis is wide ranging and sophisticated the language is literate and accessible to a broad audience *Reconstructing biotechnologies* Guido Ruivenkamp, Shuji Hisano, Joost Jongerden, 2023-08-28 The main subject of this publication is the co creation of society and biotechnology The authors do not treat society and biotechnology as separate domains instead they consider technologies as socially constructed The main focus of this publication is on agro biotechnologies and the contributors present perspectives for reconstruction both from and in the North and the South *Reconstructing biotechnologies* offers a range of critical social analyses confronting the actuality of biotechnology with the potentialities of its social reconstruction In doing that the book develops and merges literature from four different disciplines namely i critical theory and its analyses of technology and power ii political economy critically assessing the interrelationship between economy politics and technology iii social constructivism which holds that technology is the product of agency and knowledge systems and iv the analysis of rural society and agrarian technologies in rural sociology *Reconstructing biotechnologies* introduces exciting approaches and examples into the social reshaping of biotechnologies It brings together critical examinations of contemporary biotechnology development and puts forward possible alternatives written by critical scholars The contributions in this publication are for students and scholars in a wide range of disciplines such as social and political sciences science and technology studies and development studies The editors of the book are associated with the Social Sciences Department of Wageningen University in the Netherlands and the Graduate School of Economics of Kyoto University in Japan They have published extensively on social and political theory and biotechnology **American Entomologist** , 2009 **Fundamentals of Weed Science** Robert L Zimdahl, 2013-08-09 This book addresses herbicides and their use as an important aspect of modern weed management and strives to place them in an ecological framework Many weed scientists believe agriculture is a continuing struggle with weeds without good weed control good and profitable agriculture is impossible Each agricultural discipline sees itself as central to agriculture s success and continued progress and weed science is no exception While not denying the importance of weed management to successful agriculture this book places it in a larger ecological context The roles of culture economics and politics in weed management are also discussed enabling scientists and students to understand the

had Thus re establishing a meaningful bridge between ethics and agriculture is necessary A relatively new science ecology with both a new epistemological tool that of the ecosystem concept and a unique narrative of sustainable development can help bridge this gap This book focuses on ethics as a lever for raising scientific technical social economic and political solutions to adopt in agriculture as a model of symbiotic relationships between man and nature It provides a detailed discussion of the ecological intensification practices in order to maximize ecological and ethical services wherein agroecosystems will follow

Animal Welfare Science, Husbandry and Ethics: The Evolving Story of Our Relationship with Farm Animals Mark Fisher, 2018-12-14 Animal Welfare has been a subject of intellectual and academic study for a long time In the past philosophers thought leaders and scientists have contributed to the debate and seismic changes such as the advent of post war industrial farming have brought about changes in attitudes to the way animals are farmed Animal welfare as a science and philosophy can be understood as a trajectory through history of our understanding of our relationship with animals enhanced in recent years through studies into animal behaviour and cognition and societal changes in the way we view animals Animal Welfare Science Husbandry and Ethics charts the history of our understanding of farm animal welfare throughout time the human use of animals in different eras and farming in different systems seeing the emergence of intensification and science and technology The book examines the human non human animal relationship with a philosophical approach examining the connections and disconnections between animals and people and charts the beliefs and motives of different philosophers theories and movements in animal welfare from early history to the present The book also looks at our current animal welfare systems examining what is working and what is not the pathway to how we got here and looks at future considerations for animal welfare putting forward the author s thoughts on achieving a sustainable animal welfare model Intended for animal welfare students teachers researchers and academic libraries Animal Welfare Science Husbandry and Ethics introduces a complex subject requiring an understanding of the underlying factors and drivers of human behaviour and farming systems Only by acknowledging the complexity and understanding the factors contributing to that complexity can we hope to develop an equitable and sustainable animal welfare for the future 5m Books [The Ethics of Intensification](#) Paul B. Thompson, 2008-09-19 The Ethics of Agricultural Intensification An Interdisciplinary and International Conversation Paul B Thompson and John Otieno Ouko Global agriculture faces a number of challenges as the world approaches the second decade of the third millennium Predictions unilaterally indicate dramatic increases in world population between 2010 and 2030 and a trend in developing countries toward greater consumption of animal products could multiply the need for production of basic grains even further Although global food production in 2000 was estimated to be adequate for the existing population hunger and malnutrition are persistent problems that have led decision makers to recognize that increasing food production in specific regions may be the most effective way to address food security for impoverished peoples At the same time there will need to be policy adjustments that improve poor people s access to current

food supplies without simultaneously undercutting the ability of local producers to obtain needed cash income. What is more, the uncertain effects of global climate change on agricultural ecosystems complicate planning for this process while poorly understood processes of globalization create additional unknowns from the side of social systems. In short, despite surpluses in many parts of the developed world, finding ways to increase food production on both selected regional and a total global basis remains a priority for many farmers, policy makers, and agricultural researchers.

Sustainable food production and ethics

Werner Zollitsch, Christoph Winckler, Susanne Waiblinger, Alexander Haslberger, 2023-08-28 Sustainability has become an issue widely debated in many countries. Given the central role of food supply and the emotional relationship that modern mankind still has to its food, sustainability is seen as a value which has to be maintained throughout food supply chains. The complexity of modern food systems invokes a variety of ethical implications which emerge from contrasts between ideals, perceptions, and the conditions of technical processes within food systems and the concerns connected to this. This book covers a broad range of aspects within the general issue of sustainable food production and ethics. Linking different academic disciplines, topics range from reflections about the roots of sustainability and the development of concepts and approaches to globalisation and resilience of food systems as well as specific ethical aspects of organic farming and animal welfare. Modern technologies which are intensely advocated by certain stakeholder groups and their societal challenges are addressed as are many other specific cases of food production and processing, consumer perception and marketing.

The Spirit of the Soil

Paul B. Thompson, 2017-05-25 In this second edition of *The Spirit of the Soil: Agriculture and Environmental Ethics*, Paul B. Thompson reviews four worldviews that shape competing visions for agriculture. Productionists have sought increasing yields to make two seeds grow where only one grew before, while traditional visions of good farming have stressed stewardship. These traditional visions have been challenged by two more worldviews: a call for a total cost accounting for farming and an advocacy for a holistic perspective. Thompson argues that an environmentally defensible systems approach must draw upon all four worldviews, recognizing their flaws and synthesizing their strengths in a new vision of sustainable agriculture. This classic 1995 study has been thoroughly revised and significantly expanded in its second edition with up-to-date examples of agriculture's impact on the environment. These include extensive discussions of new pesticides and the effects of animal agriculture on climate and other areas of the environment. In addition, a new final chapter discusses sustainability, which has become a dominant idea within environmental studies and agrarian political philosophy.

Reflections on the Role of

Ethics in Agriculture Robert Zimdahl, 2024-07-01 This volume is an update to *Weed Science: A Plea for Thought Revisited*, published by Springer in 2012. More than a decade after the first edition, ethical discussion on the use of pesticides for weed management is largely absent. Startlingly, weed science and agriculture have continued on the same path and are still dominated by capital, chemical, and energy-intensive practices, including the paralysis of pesticides. This second edition expands upon the first, using recent data to confirm the dominance of herbicides. The revision includes chapters which

emphasize the role of ethics in agriculture and the reasons it should but has not yet become part of agricultural education This includes suggestions on how education in agricultural ethics should be shifting and whose responsibility it is The revised version also includes a discussion on the role of genetically modified crops and the consequences of using these crops both positive and negative Scientists have developed a wealth of knowledge they bring to the surface of their disciplinary silos Yet there needs to be greater discussion on the necessity and risks of agricultural science and technology This revised version provides a rigorous examination of weed science s goals and ethics and challenges the way we manage weeds and agriculture
