## **Agrotechnology For Dryland Farming:**

**Agrotechnology for Dryland Farming 2nd. Revised Ed.** A.M. Dhopte, 2017-01-01 It is known that dryland farming is not remunerative due to several constraints. Location specific technologies have been evolved for yield stabilization in dryland farming and conservation of fragile ecosystem by sustainable use of soil and water resources. Drought and flood situations are experienced some where in the country inspite of plentiful resources of waters unshine hours but poverty among farmers still exists. This is a point of serious concern. Agrotechniques are alone the answer for low productivity 0.8 t/ha of 90% rainfed farming. To feed over one billion galloping population of country there is a need to increase the productivity to 1.5 t/ha by 2010 AD. This book deals with seed soil watersheds crop weed and nutrient management use of weather forecast measure to save crops under abiotic stresses like drought and flooding selection of crops and variety reclamation of degraded land organic recycling agro meteorological approaches water requirement early harvest on physiological maturity agro hydro modelling and suitable medicinal and aromatic crops to make dry farming remunerative for welfare of common farmers. This is the first comprehensive book where large number of agro techniques are incorporated. Chapters are written by eminent scientists of national repute who have devoted their life time to solve probable problems of dryland. Agro techniques can well be adopted with ease by farmers through extension agencies to avoid bankruptcy. Book includes all relevant aspects of rainfed farming and is therefore a valuable addition in Dryfarming and meets the expectations of all those interested in rainfed farming in the country and abroad. Long outstanding demand has thus fulfilled with this book. The novel approach of editor has made the readers task quick and minimized their efforts by compiling all agro techniques together at one place for benefit of farmers.

Sustainable Development of Dryland Agriculture in India R.P. Singh, 2011-01-01 There are chapters on varied topics covering the major gamut of dryland agriculture. The topics covered by eminent scientists are Dryland agricultural research in India a historical perspective. The eminence of authors and the institutions they represent gives credence to the contents of the book. Research and development workers all would like to possess this book for ready reference and use.

Sustainable Dryland Farming A.M. Dhopte, 2020-10-09 Sustainability is extremely important in dryland farming under global climatic change. Technology devised by various agricultural institutions is provided in this book. Variation in environmental factors may influence entire ecological system which may not be ideal for agriculture. Under such global scenario plant growth is under jeopardy. New varieties have to be developed to suit the varied climate or crop strategy in view of crop domain suiting ideal available temperature has to be framed to make dryland farming sustainable. Various agrotechnology needs to be adapted to avoid depletion in productivity. Global climatic change in future may limit the productivity of available varieties. Corporate farming may come to rescue the problem under present scenario. Various

agrotechnologies described in this book may help the farmers and planners to overcome the situation in future Critical problems have been dealt with probable solutions to suit the requirements Multicropping system organic farming watersheds promotion reclamation of degraded soils soil health cards use of portals of weather forecast early harvest on physiological maturity and use of instant remedies timely under unfavourable season shall ease the failure of crop Long outstanding demand has thus fulfilled with this book      **Dryland Agriculture** ,2024-02-04 The book on dryland agriculture endeavors to acquaint readers with the unique characteristics of dry farming while delving into subjects such as drought management soil and water management crop production techniques crops and cropping patterns intercropping systems suitable plant varieties biodiversity and climate resilient practices to counter the challenges posed by climate change and dryland agriculture The overriding objective of the book is to offer practical solutions to the challenges confronting dryland agriculture The book targets the requirements of agricultural scientists students educators extension workers and knowledgeable farmers      **Agro-Technology Transfer Programme: An Assessment** D DasGupta, S Chowdhury,2002 In Indian context      *Soybean Improvement* Shabir Hussain Wani,Najeeb ul Rehman Sofi,Muhammad Ashraf Bhat,Feng Lin,2022-10-17 Soybean Glycine max L Merr is one of the most important crops worldwide Soybean seeds are vital for both protein meal and vegetable oil Soybean was domesticated in China and since last 4 5 decades it has become one of the most widely grown crops around the globe The crop is grown on an anticipated 6% of the world s arable land and since the 1970s the area in soybean production has the highest percentage increase compared to any other major crop It is a major crop in the United States Brazil China and Argentina and important in many other countries The cultivated soybean has one wild annual relative G soja and 23 wild perennial relatives Soybean has spread to many Asian countries two to three thousand years ago but was not known in the West until the 18th century Among the various constraints responsible for decrease in soybean yields are the biotic and abiotic stresses which have recently increased as a result of changing climatic scenarios at global level A lot of work has been done for cultivar development and germplasm enhancement through conventional plant breeding This has resulted in development of numerous high yielding and climate resilient soybean varieties Despite of this development plant breeding is long term by nature resource dependent and climate dependent Due to the advancement in genomics and phenomics significant insights have been gained in the identification of genes for yield improvement tolerance to biotic and abiotic stress and increased quality parameters in soybean Molecular breeding has become routine and with the advent of next generation sequencing technologies resulting in SNP based molecular markers soybean improvement has taken a new dimension and resulted in mapping of genes for various traits that include disease resistance insect resistance high oil content and improved yield This book includes chapters from renowned potential soybean scientists to discuss the latest updates on soybean molecular and genetic perspectives to elucidate the complex mechanisms to develop biotic and abiotic stress resilience in soybean Recent studies on the improvement of oil quality and yield in soybean have also been
