Iqbal Hossain,Nadia Sultana,2017-09 Coronary artery disease is the most common type of heart diseases and the leading cause of death worldwide due to heart disease It occurs when the arteries that supply blood to the heart become narrowed or blocked by a buildup of cholesterol and other material at the inner wall of the artery Limitation of blood flow to the heart causes ischemia of the myocardial cells Myocardial cells may die from lack of oxygen and this is called a myocardial infarction or more commonly a heart attack Treatment options include medication surgery or catheter based procedures Several types of catheter based procedures are available During balloon angioplasty a special balloon catheter is passed into the narrowed segment of the artery and expands the balloon which thus opens the artery and compresses the blockage against the wall of the artery Stents are very small metal mesh tubes that can be inserted via a balloon catheter into the narrowed segment of the artery When the balloon is inflated the stent expands and is embedded into the artery vessel wall which thus opens the previously narrowed segment of artery The balloon is then deflated and removed along with the catheter and the stent is left behind to serve as a metal framework for the artery In case of drug eluting stents a certain amount of anti flammating drug is loaded in the coating over the base stent This drug is released at the wall of diseased artery so that restenosis cannot take place at the place of artery where the stent has been implanted In this thesis a drug eluting stent was studied where there was a biodegradable coating over a bare metal stent in which there was some amount of therapeutic drug The degradation of the biodegradable coating layer thickness was determined with respect to time which was actually representing the remaining drug concentration in the coating layer Then using this variable drug concentration as the drug concentration at initial tissue layer concentration profile of drug in tissue layer with respect to time and position was determined using finite volume algorithm where this algorithm was coded using MATLAB programming language **Medication Safety** Henri Richard Manasse,2005

Medication safety is the most challenging goal for pharmacy practice and patient safety professionals in all health care facilities. This book serves as an essential reference guide for planning and implementing a medication safety program. Written by nationally recognized experts, *Medication Safety: A Guide for Health Care Facilities* provides a comprehensive analysis of principles and practices associated with the prevention and identification of medication errors as well as interdisciplinary facility-wide recommendations for achieving medication safety in all settings. This book is divided into four sections so users can easily find the information they need: the Importance of Medication Safety, the Medication Safety Team, Building a Safe Medication Use System, and Measuring Medication Safety. Chapters include information on Business and financial justification for patient safety, Best practices and scientific evidence, Internal reporting and education, Leadership in patient safety, Medication safety in clinical trials, Medication safety assessment tools, The role of the pharmacist in medication safety, Safe use of technology in medication safety, Poison centers, Use of drug information resources, and more. *Program 120 Female Handbook B* Danny Purser, 2015-08-26 *Program 120 Female B Handbook on Preventive Medicine* A condensed version of the last half on the benefit of hormones of his famous *Program 120* textbook on disease prevention in this book Dr Purser a pituitary endocrinology researcher, lecturer, and author discusses normal lab values in women. He addresses proper testing, diagnosis, and hormone replacement therapy for hormones such as somatropin, testosterone, thyroid, melatonin, progesterone, estradiol, and DHEA. Everything is highly referenced and researched. He also gives steps on how to make your levels normal and to make your life better. **Secondary Neoplasias Following Chemotherapy, Radiotherapy, and Immunosuppression** U. Rüther, C. Nunnensiek, H. -J. Schmoll, W. Queisser, W. Scheithauer, 2001-02-05 Complete remissions and survival times of tumor patients are increasing steadily, and so is the risk of developing therapy-associated secondary malignancy. At the same time, we face the growing diagnostic and therapeutic problem of tumorigenesis during posttransplantation immunosuppressive therapy. The theoretical section delves into the various causes of tumorigenesis, with special chapters on secondary chemo- and/or radiotherapy-induced tumorigenesis and neoplasia occurring during posttransplantation immunosuppressive therapy. The risk of individual cytostatic agents causing secondary malignoma is covered, as are the functions and dysfunctions of immunosurveillance. The immune system's methods of recognizing tumors are also examined, and specific information on the role of herpesviruses in organ transplantation is included. The clinical part of the book portrays in depth major hematologic and oncologic malignancies that can arise after chemo- and/or radiotherapy administered after organ transplantation. With this book, clinical hemato-oncologists and those working in transplantation will gain greater insight into the risks, genesis, and complications of secondary malignancy, but also into its treatment today and in the future. Last but not least, the importance of international collaboration for the advancement of diagnosis and therapy is underscored, as is reflected by the international team of contributing authors. **Drug Information: A Guide for Pharmacists, 7th Edition** Patrick M.
