Aids Pandemic Impact On Science And Society:

The AIDS Pandemic Kenneth H. Mayer, H.F. Pizer, 2004-12-21 The AIDS Pandemic explores the ways in which HIV/AIDS has and continues to transform the wide range of related disciplines it touches. Novel perspectives are provided by a unique panel of internationally recognised experts who cover the unprecedented impact of AIDS on culture, demographics and politics around the world, including how it affected the world's economy, health sciences, epidemiology and public health. This important far-reaching analysis uses the lessons learned from a wide array of disciplines to help us understand the current status and evolution of the pandemic as it continues to evolve. Unique and timely presentation of new theories and perspectives. Concentrates on the changes that have taken place in a broad array of related disciplines. Provides key contextual information for those new to the field or at interface areas between disciplines. Includes an international focus on evolving African and Asian experiences. Focuses on the current strategies for developing vaccines and microbicides. Outlines harm reduction and prevention programs. Explores issues related to delivery of life-saving AIDS medications in resource-constrained environments.

AIDS: Science and Society, **AIDS: Science & Society** Hung Y. Fan, Ross F. Conner, Luis P. Villarreal, 2010-03-10 The Social Ecology of Infectious Diseases Kenneth H. Mayer, H.F. Pizer, 2011-04-28 Social Ecology of Infectious Diseases explores how human activities enable microbes to disseminate and evolve, thereby creating favorable conditions for the diverse manifestations of communicable diseases. Today, infectious and parasitic diseases cause about one-third of deaths and are the second leading cause of morbidity and mortality. The speed at which changes in human behavior can produce epidemics is well illustrated by AIDS, but this is only one of numerous microbial threats whose severity and spread are determined by human behaviors. In this book, forty experts in the fields of infectious diseases, the life sciences and public health explore how demography, geography, migration, travel, environmental change, natural disaster, sexual behavior, drug use, food production and distribution, medical technology, training and preparedness, as well as governance, human conflict and social dislocation influence current and likely future epidemics. Provides essential understanding of current and future epidemics. Presents a crossover perspective for disciplines in the medical and social sciences and public policy, including public health, infectious diseases, population science, epidemiology, microbiology, food safety, defense, preparedness and humanitarian relief. Creates a new perspective on ecology based on the interaction of microbes and human activities.

Eras in Epidemiology Mervyn Susser, Zena Stein, 2009 At its core, epidemiology is concerned with changes in health and disease. The discipline requires counts and measures of births, health disorders and deaths, and in order to make sense of these counts, it requires a population base defined by place and time. Epidemiology relies on closely defined concepts of cause, experimental or observational of the physical or social environment or in the laboratory. Epidemiologists are guided by these concepts and have often contributed to their development. Because the disciplinary focus is on health and disease in populations, epidemiology has always been an integral driver of public health, the vehicle that societies have evolved to

combat and contain the scourges of mass diseases In this book the authors trace the evolution of epidemiological ideas from earliest times to the present Beginning with the early concepts of magic and the humors of Hippocrates it moves forward through the dawn of observational methods the systematic counts of deaths initiated in 16th century London by John Graunt and William Petty the late 18th century Enlightenment and the French Revolution which established the philosophical argument for health as a human right the national public health system begun in 19th century Britain up to the development of eco epidemiology which attempts to re integrate the fragmented fields as they currently exist By examining the evolution of epidemiology as it follows the evolution of human societies this book provides insight into our shared intellectual history and shows a way forward for future study

Public Health Aspects of HIV/AIDS in Low and Middle Income Countries

David Celentano, Chris Beyrer, 2008-09-11 It has now been 25 years since the apocryphal report in the CDC Morbidity and Mortality Weekly Report dated June 5 1981 entitled Pneumocystis Pneumonia Los Angeles which announced what was to become HIV AIDS HIV has now affected virtually all countries that have looked for it and has had a devastating impact on the public health and medical care infrastructure around the world HIV AIDS has also disproportionately affected nations with the least capacity to confront it especially the developing world nations in Sub Saharan Africa South and Southeast Asia and the emerging republics of Eastern and Central Asia The pandemic unlike any other disease of our time has had profound impacts on the practice of public health itself bringing affected communities into decision making demanding North South partnerships and collaborations and changing the basic conduct of clinical and prevention trials research While much has been written in scholarly publications for medical epidemiologic and disease control specialists there is no comprehensive review of the public health impact and response to HIV AIDS in the developing

world This edited volume seeks to systematically describe the emergence and form of the epidemics epidemiology the social community and political response and the various measures to confront and control the epidemic with varying levels of success Of particular importance are strategies that appear to have been useful in ameliorating the epidemic while contrasting the situation in a neighboring country or region where contrasting prevention or care initiatives have had a deleterious outcome Common to all responses has been the international multi sectoral response represented by the Global Fund for HIV AIDS Malaria and Tuberculosis the President s Emergency Plan for AIDS Relief and the Gates Foundation among others to promote HIV pharmacologic therapy in resource poor settings The chapter authors will explore the political challenges in meeting HIV AIDS prevention and care in concert with the public health realities in specific country and regional context

Divide and Deal Ian Shapiro, Peter A. Swenson, Daniela Donno Panayides, 2010-07-12 Why are democracies so unequal Despite the widespread expectation that democracy via expansion of the franchise would lead to redistribution in favor of the masses in reality majorities regularly lose out in democracies Taking a broad view of inequality as encompassing the distribution of wealth risk status and well being this volume explores how institutions individuals and coalitions contribute to the often surprising twists and turns of distributive politics The contributors hail from a range of disciplines and employ an array of methodologies to illuminate the central questions of democratic distributive politics What explains the variety of welfare state systems and what are their prospects for survival and change How do religious beliefs influence people s demand for redistribution When does redistributive politics reflect public opinion How can different and seemingly opposed groups successfully coalesce to push through policy changes that produce new winners and losers The authors identify a variety of psychological and institutional factors that influence distributive outcomes Taken together the chapters highlight a common theme politics matters In seeking to understand the often puzzling contours of distribution and redistribution we cannot ignore the processes of competition bargaining building and destroying the political alliances that serve as bridges between individual preferences institutions and policy outcomes

Gostin,2005-11-16 In this collection of essays Lawrence O Gostin an internationally recognized scholar of AIDS law and policy confronts the most pressing and controversial issues surrounding AIDS in America and around the world He shows how HIV AIDS affects the entire population infected and uninfected by influencing our social norms our economy and our country s role as a world leader Now in the third decade of this pandemic the nation and the world still fail to respond to the needs of persons living with HIV AIDS and continue to tolerate injustice in their treatment Gostin argues AIDS both in the United States and globally deeply affects poor and marginalized populations and many U S policies are based on conservative moral values rather than public health and social justice concerns Gostin tackles the hard social legal political and ethical issues of the HIV AIDS pandemic privacy and discrimination travel and immigration clinical trials and drug pricing exclusion of HIV infected health care workers testing and treatment of pregnant women and infants and needle exchange programs This book provides an inside account of AIDS policy debates together with incisive commentary It is indispensable reading for advocates scholars health professionals lawyers and the concerned public **The HIV Pandemic** Peter Piot,2007-12-14 As we approach the 25th anniversary of the first recognition of HIV AIDS in 1981 this book reflects on the international impact of the disease It has persistently remained a global issue with more than 50 million people worldwide estimated to have been infected since that date This ambitious book written by 165 authors from 30 countries offers a multi country comparative study that examines how the response to the common global threat of HIV is shaped by the history culture institutions and health systems of the individual countries affected Increasingly the shift of health systems has been from prevention only as the main containment strategy to a strategy that includes scaling up HIV treatment and care and prevention services including antiretroviral therapy Thus all parts of the health system must be involved policy makers healthcare professionals and users of the services have been forced to think differently about how services are financed how resources are allocated how systems are structured and organized how services are delivered to patients and how the resulting activity is monitored and evaluated in order to improve the effectiveness efficiency equity and acceptability of the response This book is unique in attempting to describe and assess a range of responses across the globe by situating them within the characteristics of each country and its

health system Most chapters combine a health policy expert with an HIV specialist allowing both a top down health system approach and a bottom up HIV specific perspective There are thematic and analytical sections which provide an overview and some suggestions for solutions to the most serious outstanding issues and chapters which analyse specific country and organisational responses There is no perfect health system but the evidence provided here allows the sharing of knowledge and a opportunity to assess the impact and reactions to an epidemic that must be considered a long term issue *Science and Technology and the Future Development of Societies* National Research Council, Policy and Global Affairs, Development, Security, and Cooperation, Office for Central Europe and Eurasia, Committee on the U.S.-Iran Workshop on Science and Technology and the Future Development of Societies, 2008-08-10 In June 2006 seventeen scientists and educators selected by the National Academies the Academy of Sciences of Iran and the Acad mie des Sciences of France held a workshop at the estate of the Fondation des Treilles in Toutour France to discuss issues concerning the role of science in the development of modern societies *Science and Technology and the Future Development of Societies* includes the presentations made at the workshop and summarizes the discussions that followed the presentations Topics of the workshop included science and society issues the role of science and engineering in development obstacles and opportunities in the application of science and technology to development scientific thinking of decision makers management and utilization of scientific knowledge and science society and education This book also provides useful background for the further development of interactions of Western scientists and educators with Iranian specialists
