

A photograph of a middle-aged man with grey hair and black-rimmed glasses, smiling and aiming a red-tipped pencil at a target in the background. He is wearing a dark suit jacket, a white shirt, and a striped tie. The target is a circular board with a blue center and a yellow bullseye. The background is slightly blurred, showing a laboratory or office setting.

Taking Science to the Moon Donald A. Beattie, 2021-04-27 A former NASA scientist shares a behind the scenes history of the Apollo space program and the fight to include science activities in the missions In 1961 President Kennedy set a goal of putting a man on the moon in order to assert American dominance in the escalating Cold War The mission's sole purpose was to beat the Soviets to the punch So how did science get aboard the Apollo rockets And what did scientists do with the space allotted to them Donald A Beattie served at NASA from 1963 to 1973 in several management positions including as program manager of Apollo Lunar Surface Experiments In **Taking Science to the Moon** Beattie takes readers inside NASA

headquarters and the struggle to include science payloads and lunar exploration as part of the Apollo program **Exploring the Unknown: Space and Earth Science**, 1995 **First Man** James R. Hansen, 2012-11-27 On July 20 1969 the world stood still to watch American astronaut Neil A Armstrong become the first person ever to step on the surface of another heavenly body Upon his return to Earth Armstrong was celebrated for his monumental achievement He was also as NASA historian Hansen reveals in this authorized biography misunderstood Armstrong's accomplishments as an engineer a test pilot and an astronaut have long been a matter of record but Hansen's access to private documents and unpublished sources and his interviews with more than 125 subjects including more than fifty hours with Armstrong himself yield the first in depth analysis of this elusive reluctant hero

Facing the Heat Barrier T. A. Heppenheimer, 2006 Hypersonics is the study of flight at speeds where aerodynamic heating dominates the physics of the problem Typically this is Mach 5 and higher Hypersonics is an engineering science with close links to supersonics and engine design Within this field many of the most important results have been experimental The principal facilities have been wind tunnels and related devices which have produced flows with speeds up to orbital velocity Why is it important Hypersonics has had two major applications The first

has been to provide thermal protection during atmospheric entry Success in this enterprise has supported ballistic missile nose cones has returned strategic reconnaissance photos from orbit and astronauts from the Moon and has even dropped an instrument package into the atmosphere of Jupiter The last of these approached Jupiter at four times the speed of a lunar mission returning to Earth Work with re entry has advanced rapidly because of its obvious importance The second application has involved high speed propulsion and has sought to develop the scramjet as an advanced airbreathing ramjet Scramjets are built to run cool and thereby to achieve near orbital speeds They were important during the Strategic Defense Initiative when a set of these engines was to power the experimental X 30 as a major new launch vehicle This effort fell short but the X 43A carrying a scramjet has recently flown at Mach 9.65 by using a rocket Atmospheric entry today is fully mature as an engineering discipline Still the Jupiter experience shows that work with its applications continues to reach for new achievements Studies of scramjets by contrast still seek full success in which such engines can accelerate a vehicle without the use of rockets Hence there is much to do in this area as well For instance work with computers may soon show just how good scramjets can become NASA SP 2007 4232 Defining NASA W. D. Kay, 2012-02-01 Most observers would point to the 1969 Apollo moon landing as the single greatest accomplishment of NASA yet prominent scientists engineers and public officials were questioning the purpose of the U S space program even at the height of its national popularity Defining NASA looks at the turbulent history of the space agency and the political controversies behind its funding W D Kay examines the agency's activities and behavior by taking into account not only the political climate but also the changes in how public officials conceptualize space policy He explores what policymakers envisioned when they created the agency in 1958 why support for the Apollo program was so strong in the 1960s only to fade away in such a relatively short period of time what caused NASA and the space program to languish throughout most of the 1970s only to reemerge in the 1980s and finally what role the agency plays today **NASA Space Applications, Aeronautics and Space Research and Technology, Tracking and Data Acquisition/support Operations, Commercial Programs, and Resources, 1979-1988** Judy A. Rumerman, 2000 NASA Historical Data Book, 1988 *The Wind and Beyond: Reinventing the airplane*, 2003

Realizing the Dream of Flight Virginia Parker Dawson, Mark D. Bowles, 2005 Realizing the Dream of Flight National Aeronautics and Space Administration, 2005-12-31 These essays in celebration of the Wright brothers first flight 100 years ago grew out of presentations by a group of prominent scholars in 2003 at a conference sponsored by the NASA History Division and held at the Great Lakes Science Center in Cleveland Ohio The volume focuses on the careers of some of the many men and women who helped to realize the dream of flight both through the atmosphere and beyond These accounts are original and compelling because they examine the history of flight through the lens of biography The Wind and Beyond: Reinventing the airplane James R. Hansen, 2003 *Societal Impact of Spaceflight* Steven J. Dick, Roger D. Launius, 2007 Since the dawn of spaceflight advocates of a robust space effort have argued that human activity beyond Earth

makes a significant difference in everyday life Assertions abound about the impact of spaceflight on society and its relationship to the larger contours of human existence Fifty years after the Space Age began it is time to examine the effects of spaceflight on society in a historically rigorous way Has the Space Age indeed had a significant effect on society If so what are those influences What do we mean by an impact on society And what parts of society Conversely has society had any effect on spaceflight What would be different had there been no Space Age The purpose of this volume is to examine these and related questions through scholarly research making use especially of the tools of the historian and the broader social sciences and humanities Herein a stellar array of scholars does just that and arrives at sometimes surprising conclusions

"Read You Loud and Clear!" Sunny Tsiao, 2008 These accounts tell how international goodwill and foreign cooperation were crucial to the operation of the network and why the space agency chose to build the STDN the way it did More than anything else the story of NASA's STDN is about the unsung heroes of the space program
