Air-Sea Exchange: Physics, Chemistry and Dynamics G.L. Geernaert, 2013-04-17 During the 1980 s a wealth of information was reported from field and laboratory experiments in order to validate and/or modify various aspects of the surface layer Monin Obukhov M O similarity theory for use over the sea and to introduce and test new concepts related to high resolution flux magnitudes and variabilities For example data from various field experiments conducted on the North Sea Lake Ontario and the Atlantic experiments among others yielded information on the dependence of the flux coefficients on wave state In all field projects the usual criteria for satisfying M O similarity were applied The assumptions of stationarity and homogeneity was assumed to be relevant over both small and large scales In addition the properties of the outer layer were assumed to be correlated with properties of the surface layer These assumptions generally required that data were averaged for spatial footprints representing scales greater than 25 km or typically 30 minutes or longer for typical windspeeds While more and more data became available over the years and the technology applied was more reliable robust and durable the flux coefficients and other turbulent parameters still exhibited significant unexplained scatter Since the scatter did not show sufficient reduction over the years to meet customer needs in spite of improved technology and heavy financial investments one could only conclude that perhaps the use of similarity theory contained too many simplifications when applied to environments which were more complicated than previously thought

Variability of Air Temperature and Atmospheric Precipitation in the Arctic Rajmund Przybylak, 2006-04-11 It has been known at least since the end of the century that the polar areas play a very important role in the formation of the Earth s climates It is also known today that they are the most sensitive regions to climatic change and are thus perfect case studies for the detection of such changes The most serious obstacle to the study of climatic and other geographical elements of the polar areas including the Arctic has always been the severe climatic conditions which prevail in these regions Because of these extreme conditions research into particular elements of the climatic system including the atmosphere began here much later than it did in lower latitudes For instance the whole area of the Arctic was not sufficiently covered with a network of meteorological stations until the late 1940s and even then there were large areas of the central Arctic and the Greenland interior for which no data were available This is probably why it was not until the start of the 1990s that a body of work began to appear which analysed in any depth climatic variability for the Arctic as a whole While a considerable number of papers had been published before this period most of them were local studies presenting highly localised information providing air temperature measurements but often little else

Cloud Optics Alexander A. Kokhanovsky, 2011-03-07 Clouds affect the climate of the Earth and they are an important factor in the weather Therefore their radiative properties must be understood in great detail This book summarizes current knowledge on cloud optical properties for example their ability to absorb transmit and reflect light which depends on the clouds geometrical and microphysical characteristics such as sizes of droplets and crystals their shapes and structures In

addition problems related to the image transfer through clouds and cloud remote sensing are addressed in this book in great detail This book can be an important source of information on theoretical cloud optics for cloud physicists meteorologists and optical engineers All basic ideas of optics as related to scattering of light in clouds e g Mie theory and radiative transfer are considered in a self consistent way Consequently the book can also be a useful textbook to newcomers to the field

Nonlinear Physical Oceanography Henk A. Dijkstra, 2013-04-18 In this book the methodology of dynamical systems theory is applied to investigate the physics of the global ocean circulation Topics include the dynamics of the Gulf Stream in the Atlantic Ocean the stability of the thermohaline circulation and the El Ni o Southern Oscillation phenomenon in the Tropical Pacific On the other hand the book also deals with the numerical methods for applying bifurcation analysis on large dimensional dynamical systems with thousands or more degrees of freedom which arise through discretization of ocean models The novel approach in understanding the phenomena of climate variability is through a systematic analysis within a hierarchy of models using these techniques In this way a nice overview is obtained of the relations between the results of the different models within the hierarchy Mechanistic description of the physics of the results is provided and where possible links with results of state of the art models and observations are sought The reader is expected to have a background in basic incompressible fluid dynamics and applied mathematics although the level of the text is mixed and sometimes quite introductory Each chapter is rather self contained and many details of derivations are provided The book is aimed at graduate students and researchers in meteorology oceanography and related fields who are interested in tackling fundamental problems in dynamical oceanography and climate dynamics [Applications of Seasonal Climate Forecasting in](#)

[Agricultural and Natural Ecosystems](#) Graeme L. Hammer, Neville Nicholls, Christopher Mitchell, 2013-03-09 Climate variability has major impacts in many parts of the world including Australia Developments in understanding of the El Ni o Southern Oscillation Phenomenon have introduced some skill in seasonal to inter annual climate forecasting Can this skill be harnessed to advantage Or do we just continue to observe these impacts How does a decision maker managing an agricultural or natural ecosystem modify decisions in response to a skillful but imprecise seasonal climate forecast Using Australian experience as a basis this book focuses on these questions in pursuing means to better manage climate risks The state of the science in climate forecasting is reviewed before considering detailed examples of applications to farm scale agricultural decisions such as management of cropping and grazing systems regional and national scale agricultural decisions such as commodity trading and government policy and natural systems such as water resources pests and diseases and natural fauna Many of the examples highlight the participatory and inter disciplinary approach required among decision makers resource systems scientists analysts and climate scientists to bring about the effective applications The experiences discussed provide valuable insights beyond the geographical and disciplinary focus of this book The book is ideally suited to professionals and postgraduate students in ecology agricultural climatology environmental planning and climate science

Ocean Waves Breaking and Marine Aerosol Fluxes Stanislaw R. Massel, 2007-10-10 The atmosphere and the ocean form a coupled system which exchanges heat momentum and water at the air sea interface The interface is dynamic and masses and energy are continually transferred across the air sea interface The energy ow from the atmosphere to the ocean generates an aerodynamically rough sea surface If the energy ow is su ciently intense at some points the surface waves will lose their stability and eventually break Breaking is a very localized and non stationary phenomenon that is a source of vorticity and turbulence Dissipated energy becomes available for mixing the water layers and for whitecapping of various scales Whitecapping is a strongly nonlinear process which involves instability of the surface waves with space and time scales several orders of magnitude smaller than those associated with gravity wave motion Whitecaps are usually formed at or near the crests of the larger waves and occur in groups with successive crests breaking downwind of one another Wave breaking is the dominant generator of the primary marine aerosol sea salt and it is a major factor in the air sea exchange of gases including carbon dioxide Most of the aerosol generated from natural waters is in the form of jet and lm drops from the bursting of air bubbles Monahan and Van Patten 1989 The enriched aerosols associated with the ejected droplets are very portant in maintaining a source of salt laden cloud condensation nuclei as well as interfacial fluxes of trace constituents including bacteria viruses heavy metals radioactivity and organic material Kerman 1986

An Introduction to Global Spectral Modeling T.N. Krishnamurti, H.S. Bedi, V. Hardiker, Leela Watson-Ramaswamy, 2006-02-02 This is an introductory textbook on global spectral modeling designed for senior level undergraduates and possibly for first year graduate students This text starts with an introduction to elementary finite difference methods and moves on towards the gradual description of sophisticated dynamical and physical models in spherical coordinates Computational aspects of the spectral transform method the planetary boundary layer physics the physics of precipitation processes in large scale models the radiative transfer including effects of diagnostic clouds and diurnal cycle the surface energy balance over land and ocean and the treatment of mountains are some issues that are addressed The topic of model initialization includes the treatment of normal modes and physical processes A concluding chapter covers the spectral energetics as a diagnostic tool for model evaluation This revised second edition of the text also includes three additional chapters Chapter 11 deals with the formulation of a regional spectral model for mesoscale modeling which uses a double Fourier expansion of data and model equations for its transform Chapter 12 deals with ensemble modeling This is a new and important area for numerical weather and climate prediction Finally yet another new area that has to do with adaptive observational strategies is included as Chapter 13 It foretells where data deficiencies may reside in model from an exploratory ensemble run of experiments and the spread of such forecasts

Microphysics of Clouds and Precipitation H.R. Pruppacher, J.D. Klett, 1996-12-31 Cloud physics has achieved such a voluminous literature over the past few decades that a significant quantitative study of the entire field would prove unwieldy This book concentrates on one major aspect cloud microphysics which involves the processes that lead to the

formation of individual cloud and precipitation particles Common practice has shown that one may distinguish among the following additional major aspects cloud dynamics which is concerned with the physics responsible for the macroscopic features of clouds cloud electricity which deals with the electrical structure of clouds and the electrification processes of cloud and precipitation particles and cloud optics and radar meteorology which describe the effects of electromagnetic waves interacting with clouds and precipitation Another field intimately related to cloud physics is atmospheric chemistry which involves the chemical composition of the atmosphere and the life cycle and characteristics of its gaseous and particulate constituents In view of the natural interdependence of the various aspects of cloud physics the subject of microphysics cannot be discussed very meaningfully out of context Therefore we have found it necessary to touch briefly upon a few simple and basic concepts of cloud dynamics and thermodynamics and to provide an account of the major characteristics of atmospheric aerosol particles We have also included a separate chapter on some of the effects of electric fields and charges on the precipitation forming processes

Rotating Hydraulics Lawrence L.J. Pratt, John A. Whitehead, 2007-12-26 This book thoroughly covers the development of the theory of rotating hydraulics making frequent use of supporting laboratory models and observational data The need to understand rotating hydraulic phenomena is growing as general interest in climate and global circulation is continuously increasing The book details cutting edge research and includes many exercises

Carbonaceous Aerosol András Gelencsér, 2007-09-28 This monograph provides a unique and comprehensive coverage of the nature and atmospheric role of carbonaceous aerosol particles these big unknowns of the global atmosphere Even the concept of carbonaceous aerosol has just recently grown out of atmospheric pollution studies without ever being anchored to solidified nomenclature and terminology It is beyond any doubt that no major breakthrough can be expected in resolving climate issues without a better understanding of the role carbonaceous particles play in the global atmosphere This monograph may serve as an indispensable reference for all those interested in virtually any aspects of global atmospheric sciences especially for those who are stakeholders in inadvertent climate modification Thus atmospheric chemists physicists meteorologists and modellers may well find this monograph a thought inspiring and sometimes provocative overview of all global phenomena affected by or related to carbonaceous aerosol An anticipated advantage of this monograph is that it brings together these diverse atmospheric phenomena under the umbrella of carbonaceous aerosol in an interdisciplinary way which is a prerequisite of resolving global scientific issues

Light Absorption in Sea Water Bogdian Wozniak, Jerzy Dera, 2007-05-11 This book provides a detailed description of light absorption and absorbents in seawaters with respect to provenance region of the sea depth of the occurrence and trophicity The text is based on a substantial body of contemporary research results taken from the subject literature over 400 references and the work of the authors over a period of 30 years
