Agent Based Computer Simulation Of Dichotomous Economic Growth:

Agent-Based Computer Simulation of Dichotomous Economic Growth Roger A. McCain, 2012-12-06 Agent Based Computer Simulation of Dichotomous Economic Growth reports a project in agent based computer stimulation of processes of economic growth in a population of boundedly rational learning agents The study is an exercise in comparative simulation That is the same family of growth models will be simulated under different assumptions about the nature of the learning process and details of the production and growth processes The purpose of this procedure is to establish a relationship between the assumptions and the simulation results The study brings together a number of theoretical and technical developments only some of which may be familiar to any particular reader In this first chapter some issues in economic growth are reviewed and the objectives of the study are outlined In the second chapter the simulation techniques are introduced and illustrated with baseline simulations of boundedly rational learning processes that do not involve the complications of dealing with long run economic growth The third chapter sketches the consensus modern theory of economic growth which is the starting point for further study In the fourth chapter a family of steady growth models are simulated bringing the simulation growth and learning aspects of the study together In subsequent chapters variants on the growth model are explored in a similar way The ninth chapter introduces trade with a spacial trading model that is combined with the growth model in the tenth chapter The book returns again and again to the key question to what extent can the simulations explain the puzzles of economic growth and particularly the key puzzle of dichotomization by constructing growth and learning processes that produce the puzzling results And just what assumptions of the simulations are most predictable associated with the puzzling results

Economic Simulations in Swarm: Agent-Based Modelling and Object Oriented Programming Francesco Luna, Benedikt Stefansson, 2012-12-06 Computer simulations of economic systems are slowly gaining ground within the economic profession However such a process is hindered by a lack of communication among researchers who do not share a common language For its object oriented structure and its versatility Swarm has the necessary characteristics to become a credible universal language of agent based simulations Economic Simulations in Swarm collects a series of original articles in such domains as macro and micro economics industrial organization monetary theory and finance all linked by a common denominator the use of the Swarm simulation platform Swarm a standard set of program libraries allows users to construct simulations where a collection of heterogeneous independent agents or elements interact through discrete events This volume offers the first extensive tutorial to the use of these software libraries developed at the Santa Fe Institute as part of the ongoing research into complexity The editors conceived the idea of this book while visiting the Santa Fe Institute as members of the Working Group on Adaptive and Computable Economics Francesco Luna is a specialist in Computable Economics and Benedikt Stefansson is an active contributor to the Swarm community

Quantitative Economic Policy Reinhard Neck, Christian Richter, Peter Mooslechner, 2008-03-04 Econometric techniques

and models are still being extensively used in the business of forecasting and policy advice This book presents recent advances in the theory and applications of quantitative economic policy with particular emphasis on fiscal and monetary policies in a European and global context The volume honors Andrew Hughes Hallett a pioneer and major scientist in quantitative economic policy analysis whose contributors are among his friends and former students

The Rational Expectation Hypothesis, Time-Varying Parameters and Adaptive Control Marco P. Tucci, 2012-12-06 One of the major controversies in macroeconomics over the last 30 years has been that on the effectiveness of stabilization policies However this debate between those who believe that this kind of policies is useless if not harmful and those who argue in favor of it has been mainly theoretical so far The Rational Expectation Hypothesis Time Varying Parameters and Adaptive Control wants to represent a step toward the construction of a common ground on which to empirically compare the two beliefs and to do this three strands of literature are brought together The first strand is the research on time varying parameters TVP the second strand is the work on adaptive control and the third one is the literature on linear stationary models with rational expectations RE The material presented in The Rational Expectation Hypothesis Time Varying Parameters and Adaptive Control is divided into two parts Part 1 combines the strand of literature on adaptive control with that on TVP It generalizes the approach pioneered by Tse and Bar Shalom 1973 and Kendrick 1981 and one recently used in Amman and Kendrick 2002 where the law of motion of the TVP and the hyperstructural parameters are assumed known to the case where the hyperstructural parameters are assumed unknown Part 2 is devoted to the linear single equation stationary RE model estimated with the error in variables EV method It presents a new formulation of this problem based on the use of TVP in an EV model This new formulation opens the door to a very promising development All the theory developed in the first part to control a model with TVP can sic et simpliciter be applied to control a model with RE

Parallel Algorithms for Linear Models Erricos Kontoghiorghes, 2012-12-06 Parallel Algorithms for Linear Models provides a complete and detailed account of the design analysis and implementation of parallel algorithms for solving large scale linear models It investigates and presents efficient numerically stable algorithms for computing the least squares estimators and other quantities of interest on massively parallel systems The monograph is in two parts The first part

consists of four chapters and deals with the computational aspects for solving linear models that have applicability in diverse areas. The remaining two chapters form the second part which concentrates on numerical and computational methods for solving various problems associated with seemingly unrelated regression equations, SURE and simultaneous equations models. The practical issues of the parallel algorithms and the theoretical aspects of the numerical methods will be of interest to a broad range of researchers working in the areas of numerical and computational methods in statistics and econometrics: parallel numerical algorithms, parallel computing and numerical linear algebra. The aim of this monograph is to promote research in the interface of econometrics, computational statistics, numerical linear algebra and parallelism. **International Bibliography of Economics** Compiled by the British Library of Political and Economic Science, 2001-11-22 IBSS is the essential tool for librarians, university departments, research institutions and any public or private institution whose work requires access to up to date and comprehensive knowledge of the social sciences. **Comparing Fairness** McCain, Roger A., 2021-08-27 Economic theory and philosophy have discussed concepts of fairness but the criteria of fairness are in each case absolute: a situation is either fair or it is not. This book draws on these literatures to propose two criteria of relative fairness and a hierarchical rule for the priority of application of these criteria with a view to comparison of practicable alternatives in public policy. **Management in the Age of Digital Business Complexity** Bill McKelvey, Renata Kaminska, Maria Paz Salmador, Nadine Escoffier, 2021-09-07 Management in the Age of Digital Business Complexity focuses on how the digital age is changing management and vastly speeding up complexity dynamics. The recent coevolution of technologies has dramatically changed in just a few years how people and firms learn, communicate and behave. Consequently, the process of how firms coevolve and the speed at which they coevolve has been dramatically changed in the digital age and managerial methods are lagging way behind. Combining his own expertise with that of a number of specialist and international co-authors, McKelvey conveys how companies that fall behind digitally can quickly be driven out of business. The book has been created for academics seeking to upgrade management thinking into the modern digital age and vastly improve the change capabilities of firms facing digital oriented competition. **Approaching Equality** Roger A. McCain, 2017-05-26 Drawing on some recent research, especially that of Piketty and his associates and on older ideas particularly from Sir Arthur Lewis, Roger McCain proposes policies that together would aim to reverse the observed tendency towards the concentration of wealth in market economies, thus approach equality. The shortcomings and dangers of rising wealth inequality are discussed both from the point of view of increasing instability and of equalitarian values. **Routledge International Handbook of Complexity Economics** Ping Chen, Wolfram Elsner, Andreas Pyka, 2024-11-29 The Routledge International Handbook of Complexity Economics covers the historical developments and early concerns of complexity theorists and brings them into engagement with the world today. Nonlinearity, Bounded Rationality, and Heterogeneity Tamotsu Onozaki,2018-01-28 This book pursues a nonlinear approach in considering both chaotic dynamical models and agent based simulation models of economics as well as their dynamical behaviors Three key concepts arising in this context are nonlinearity bounded rationality and heterogeneity which also make up the title of the book Nonlinearity is the warp that runs throughout all models because systems that exhibit chaotic or other complex behavior in the absence of any exogenous disturbances are absolutely nonlinear Bounded rationality constitutes the woof because economic systems do not exhibit complex behavior if all agents are perfectly rational as is usually assumed in neoclassical economics Agents who are boundedly rational have to struggle to do their best with limited information and tend to adapt to their economic environment without knowing what is the best Furthermore the heterogeneity of firms or consumers dyes the fabric of complex dynamics woven from the warp and woof
