Aging And The Urban Environment:

Aging and the Urban Environment Dan W. Edwards, Sloan T. Letman, 1983 **Ageing and the City** Siôn Eryl Jones, 2016

Research shows that for older people cities present physical social and economic barriers that prevent them realising their right to live in dignity and safety or enjoying their surroundings Groundbreaking initiatives to make cities more appropriate for older persons such as the World Health Organization's Age friendly Cities and Communities model have led to improvements in a number of cities Physical accessibility is absolutely essential but thinking beyond this what makes shared urban spaces and streets truly inclusive and liveable What is the relationship between our health in older age and the physical social and economic urban environment What makes older people living in cities feel vulnerable to crime or disaster and how does this affect their daily lives or the assistance they receive in times of crisis These are some of the questions explored by this report Focusing on low and middle income countries this report aims to stimulate discussion about some of the actions that governments and city authorities can take to build truly inclusive cities

Ageing in Place in Urban Environments Tine Buffel, Chris Phillipson, 2023-07-13 Ageing in Place in Urban Environments considers together two major trends influencing economic and social life population ageing on the one side and urbanisation on the other Both have been identified as dominant demographic trends of the twenty first century Cities are where the majority of people of all ages now live and where they will spend their old age Nevertheless cities are typically imagined and structured with a younger working age population in mind while older people are rarely incorporated into the mainstream of thinking and planning around urban environments Cities can contribute to vulnerability arising from high levels of population turnover environmental problems gentrification and reduced availability of affordable housing However they can also provide innovative forms of support and services essential to promoting the quality of life of older people Policies in Europe have emphasised the role of the local environment in promoting ageing in place a term used to describe the goal of helping people to remain in their own homes and communities for as long as they wish However while this has been the dominant approach the places in which older people are ageing have often proved to be challenging environments The book explores the forces behind these developments and how older people have responded Drawing upon approaches from social gerontology urban studies geography and sociology this book will be essential reading for researchers policymakers and practitioners searching for innovative ways to improve the lives of older people living in urban environments The Open Access version of this book available at <http://www.taylorfrancis.com> has been made available under a Creative Commons Attribution Non Commercial No Derivatives CC BY NC ND 4.0 license

Urban Space in the Middle Ages and the Early Modern Age Albrecht Classen, 2009-12-15 Although the city as a central entity did not simply disappear with the Fall of the Roman Empire the development of urban space at least since the twelfth century played a major role in the history of medieval and early modern mentality within a social economic and religious framework Whereas some poets projected urban space as a new utopia

others simply reflected the new significance of the urban environment as a stage where their characters operate very successfully. As today the premodern city was the locus where different social groups and classes got together sometimes peacefully sometimes in hostile terms. The historical development of the relationship between Christians and Jews for instance was deeply determined by the living conditions within a city. By the late Middle Ages nobility and bourgeoisie began to intermingle within the urban space which set the stage for dramatic and far reaching changes in the social and economic make up of society. Legal historical aspects also find as much consideration as practical questions concerning water supply and sewer systems. Moreover the early modern city within the Ottoman and Middle Eastern world likewise finds consideration. Finally as some contributors observe the urban space provided considerable opportunities for women to carve out a niche for themselves in economic terms.

Urban Design and Planning for Age-Friendly Environments Across Europe: North and South Elisa Pozo Menéndez, Ester Higuera García, 2022-09-29. This book represents a multidisciplinary and international vision across different countries in Europe that are facing similar challenges about ageing and quality of life in present cities. It is divided in three main topics: from the global context of health in cities and reduction of health inequities to the current research of different study cases focusing on residential models and the relationship with the built environment. The third chapter illustrates best practices with some study cases from different cities in Europe. Friendlier environments for older people come together with the need of innovation, smart and updated technologies, healthier environments and mitigation of climate change. Health reappears nowadays as one of the priorities for urban planning and design not only for the communicable diseases and the effect of the pandemics but also for the non communicable diseases that were also triggering the wellbeing and equity of our cities. Indeed the Covid 19 pandemic has highlighted health inequities and vulnerabilities of those areas of the city that were already deprived and facing other health problems such as obesity, diabetes, social isolation, respiratory problems or mental health issues specifically applying for vulnerable groups. Older adults have been one of the most affected groups from the pandemic's threats and derived consequences. In this context the care crisis arises intertwined with the design and planning of our cities where there is an urgent need to regenerate our environments with a perspective of sustainability, inclusion and health prevention and promotion. From the global urban challenges to the specific contextualisation of each city and study cases each chapter offers an updated insight of the main questions that we should consider to address urban planning and design from the perspective of ageing and social inclusion in European cities.

Urban Environments for Healthy Ageing Anna Lane, 2019-05-24. Around the world researchers, policy makers and practitioners are working to ensure cities and communities are prepared for the challenges and opportunities of aged and highly urbanised populations. Bringing together stakeholders from Asia, Australia, Europe and North America, this book presents new evidence and critical reviews of current knowledge to promote ongoing discussions on affordable and accessible housing to support ageing in place, built environment supports for health enhancing physical activity and mobility.
