

Sustainable agriculture

Sustainable agriculture

Agriculture provides us with the food and products we use every day.

Appropriate management of our agricultural lands leads to greater profitability, environmental benefits, and supports viable local rural communities.

Agriculture in South East Queensland

Rural areas make up about 1.9 million hectares or 85% of South East Queensland (SEQ), much of which is managed by farmers.

Grazing is the dominant rural land use, utilising 51% of the land area in SEQ, whilst other more intensive agricultural activities, such as horticulture and intensive animal production, take up a further eight per cent.

The protection and sustainable management of agricultural land in SEQ is important to safeguard the capacity of the region to produce food, fibre and other materials for communities.

The need for sustainable agriculture

Sustainable agriculture refers to agricultural production that can be maintained without harming the environment.

Land use and development has caused several forms of land degradation and cumulative impacts that need to be addressed. Increased adoption of land management practices that address identified hazards and risks, and the introduction of rehabilitation measures, will aid the recovery of landscapes, sustain longer term productivity and reduce environmental impacts across the region.

The SEQ Natural Resource Management Plan 2009-31 outlines a number of targets for the improved management and condition of the region's natural resources. Implementing sustainable agricultural practices will be critical to meeting these targets.
