Pinilla, Henry Willebald, 2018-02-06 This book brings together analysis on the conditions of agricultural sectors in countries and regions of the world's peripheries from a wide variety of international contributors. The contributors to this volume proffer an understanding of the processes of agricultural transformations and their interaction with the overall economies of Africa, Asia, and Latin America. Looking at the nineteenth and twentieth centuries, the onset of modern economic growth, the book studies the relationship between agriculture and other economic sectors, exploring the use of resources, land, labour, capital, and the influence of institutional and technological factors in the long-run performance of agricultural activities. Pinilla and Willebald challenge the notion that agriculture played a negligible role in promoting economic development in the nineteenth and twentieth centuries when the impulse towards industrialization in the developing world was more impactful.

Mountain agriculture: Opportunities for harnessing Zero Hunger in Asia Food and Agriculture Organization of

the United Nations, 2019-08-07 Mountain food security and nutrition are core issues that can contribute positively to the achievement of the Sustainable Development Goals but paradoxically are often ignored in Zero Hunger and poverty reduction related agenda. Under the overall leadership of Jos Graziano da Silva, the Former Director General of FAO, sustainable mountain agriculture development is set as a priority in Asia and the Pacific to effectively address this issue and assist Member Countries in tackling food insecurity and malnutrition in mountain regions. This comprehensive publication is the first of its kind that focuses on the multidimensional status, challenges, opportunities, and solutions of sustainable mountain agriculture development for Zero Hunger in Asia. This publication is building on the International Workshop and Regional Expert Consultation on Mountain Agriculture Development and Food Security and Nutrition Governance held by FAO, RAP, and UIR in November 2018, Beijing, in collaboration with partners from national governments, national agriculture institutes, universities, international organizations, and international research institutes. The publication provides analysis with evidence on how mountain agriculture could contribute to satisfying all four dimensions of food security to transform food systems to be nutrition sensitive, climate resilient, economically viable, and locally adaptable. From this food system perspective, the priority should be given to focus on specialty mountain product identification, e.g., Future Smart Food production, processing, marketing, and consumption, which would effectively expose the potential of mountain agriculture to contribute to Zero Hunger and poverty reduction. In addition, eight Asian country case studies not only identify context-specific challenges within biophysical, technical, policy, socio-economic, and institutional dimensions.
